WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF  
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTAT ÉIREANN.

*By Authority of the Registrar-General.*

To be purchased through any Bookseller or directly from  
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 1 VOL. LXIII.]

WEEK ENDED SATURDAY, 9TH JANUARY, 1926.

[PRICE 1½d. NET.]

*Oifig um Chláirú Ghenearála,  
Baile Átha Cliath,  
12adh lá de mhí Eanáir, 1926.*

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·0 and 16·6; Dublin Registration Area, 14·8 and 16·6; Dublin County Borough, 13·8 and 16·7; Cork, 17·0 and 17·0; Limerick, 14·9 and 20·0; and Waterford, 20·9 and 11·9.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. Among the 11 deaths from all causes for Limerick were one from enteric fever and two from measles; among the 8 deaths for Drogheda were one from measles and two from whooping-cough; and two of the 5 deaths for Tralee were from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 264—157 boys and 107 girls—and the deaths to 142—71 males and 71 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·8 per 1,000 of the population. The rate for all deaths registered in the Area was 16·7.

Included in the 126 deaths appertaining to the Area are one from enteric fever, one from scarlet fever, two from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and one from influenza. In the 3 preceding weeks deaths from scarlet fever were one, one and 2; deaths from diphtheria were one, one and 5; deaths from diarrhoea and enteritis of children under 2 years were 2, one and 3; and deaths from influenza were one, 2 and 3. There were no deaths from enteric fever in the 3 preceding weeks.

Tuberculous disease caused 4 deaths (2 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tabes mesenterica), as against 14, 11 and 18 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 20 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 3 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 14 deaths.

Two accidental deaths were registered.

Among deaths of infants under one year old, 4 were due to convulsions, 2 to broncho-pneumonia, one to gastro-enteritis, 2 to premature birth, one to congenital malformation, and 5 to congenital debility.

Twenty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 17 being infants under one year, of whom 4 were under one month old, and 50 deaths were those of persons aged 65 years and upwards, of whom 35 were 70 years of age or over.

Of the 126 deaths recorded, 51 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 9th January in 105 large English towns (including London, in which the rate was 14·0) was equal to an average annual death-rate of 14·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17·9 per 1,000 persons living, the rate for Glasgow being 19·9 and for Edinburgh 16·8.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

Deaths in Dublin Registration Area and Cork County Borough

TABLE II.—Showing for the week ended **Saturday, 9th January, 1936**, the number of DEATHS of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF DUBLIN, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 17·3 and 16·7; Dublin Registration Area, 16·7 and 16·6; Dublin County Borough, 16·9 and 16·6; Cork, 15·0 and 16·9; Limerick, 27·1 and 21·7; and Waterford, 17·1 and 13·8.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·3 per 1,000. Among the 20 deaths from all causes for Limerick were six from measles; one of the 7 deaths for Drogheda was from measles, and among the 7 deaths for Sligo were one from measles and one from influenza.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 198—99 boys and 99 girls—and the deaths to 153—74 males and 79 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·7 per 1,000 of the population. During the two weeks ending with Saturday last the death rate averaged 15·8 and was 3·9 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the two weeks was 17·4, and during the corresponding periods of the preceding ten years 21·1.

Included in the 142 deaths appertaining to the Area are two from measles, three from scarlet fever, one from diphtheria, two from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were one, 2 and 0; deaths from scarlet fever were one, 2 and one; deaths from diphtheria were one, 5 and 2; deaths from diarrhoea and enteritis of children under 2 years were one, 3 and one; and deaths from influenza were 2, 3 and one.

Tuberculous disease caused 19 deaths (14 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 4 from other forms of tuberculous disease) as against 11, 18 and 4 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer, and 15 by diseases of the heart.

There were 11 deaths from pneumonia, comprising one from broncho-pneumonia, 6 from lobar pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

Five accidental deaths were registered, of which one (that of a child aged 2 years) was caused by burns, one (also of a child aged 2 years) by scalds, one by drowning and one by a motor vehicle. There was also one death by homicide.

Among deaths of infants under one year old, one was due to diphtheria, 2 were due to convulsions, one to bronchitis, one to pneumonia, 2 to diarrhoea and enteritis, 5 to premature birth, 2 to congenital malformation, and one to congenital debility.

Twenty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 17 being infants under one year, of whom 8 were under one month old, and 43 deaths were those of persons aged 65 years and upwards, of whom 37 were 70 years of age or over.

Of the 142 deaths recorded, 60 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 16th January in 105 large English towns (including London, in which the rate was 13·7) was equal to an average annual death-rate of 13·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·3 per 1,000 persons living, the rate for Glasgow being 17·4, and for Edinburgh 13·1.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 16th January, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

TABLE IV.—Showing the NUMBER OF CASES of the undermentioned DISEASES treated in Dublin Hospitals during the week ended **Saturday, 16th January, 1926**, with the number under treatment at the close of each of the last four weeks.

DISEASES.	No. of Cases in Hospital at close of week ended			Week ended 16th January			
	Dec. 26	Jan. 2	Jan. 9	No. admitted.	Dis- charged.	Died.	No. under treatment at close of week.
Enteric Fever	14	19	15	.	1	.	14
Typhus	.	.	.	.	.	.	.
Small-pox	.	.	.	.	.	.	.
Measles	22	38	36	24	28	1	31
Scarlet Fever	104	103	103	23	13	3	110*
Diphtheria	32	43	39	13	11	1	40
Pneumonia	19	28	23	7	11	.	19

\* Exclusive of 24 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·5 and 17·5; Dublin Registration Area, 16·1 and 17·5; Dublin County Borough, 16·3 and 17·4; Cork, 17·0 and 18·6; Limerick, 14·9 and 21·7; and Waterford, 19·0 and 17·1.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·6 per 1,000. Among the 11 deaths from all causes for Limerick were 4 from measles and one from whooping cough.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 243—115 boys and 128 girls—and the deaths to 153—71 males and 82 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·1 per 1,000 of the population. During the three weeks ending with Saturday last the death rate averaged 15·9 and was 4·1 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the three weeks was 17·6, and during the corresponding periods of the preceding ten years 21·4.

Included in the 137 deaths appertaining to the Area are one from measles, and one from scarlet fever. In the 3 preceding weeks deaths from measles were 2, 0 and 2; and deaths from scarlet fever were 2, one and 3.

Tuberculous disease caused 19 deaths (16 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from general tuberculosis) as against 18, 4 and 19 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 17 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

Three accidental deaths were registered, of which one (that of a child aged 4 years) was caused by burns, and one (that of a child aged 2½ years) by scalds, and there was also one death due to infanticide.

Among deaths of infants under one year old, one was due to meningitis, 2 were due to convulsions, 3 to bronchitis, 2 to broncho-pneumonia, 8 to premature birth, 4 to congenital debility, and one to infanticide.

Forty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 14 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 137 deaths recorded, 60 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 23rd January in 105 large English towns (including London, in which the rate was 15·9) was equal to an average annual death-rate of 15·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·7 per 1,000 persons living, the rate for Glasgow being 17·2, and for Edinburgh 15·0.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

**TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 23rd January, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.**

\* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·6 and 16·4; Dublin Registration Area, 15·5 and 15·8; Dublin County Borough, 15·7 and 15·7; Cork, 15·0 and 16·0; Limerick, 35·2 and 23·0; and Waterford, 11·4 and 17·1.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·6 per 1,000. Among the 22 deaths from all causes for Cork were one from diphtheria and one from gastro-enteritis of a child under 2 years; among the 26 deaths from all causes for Limerick were 2 from measles and one from scarlet fever; one of the 7 deaths for Drogheda was from measles; included in the 5 deaths for Sligo were one from measles and one from gastro-enteritis of a child under 2 years; and one of the 4 deaths for Tralee was from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 246—119 boys and 127 girls—and the deaths to 149—73 males and 76 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·5 per 1,000 of the population. During the four weeks ending with Saturday last the death rate averaged 15·8 and was 4·5 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the four weeks was 17·6, and during the corresponding periods of the preceding ten years 21·9.

Included in the 132 deaths appertaining to the Area are one from enteric fever, 3 from measles, one from whooping cough, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years and 2 from influenza. In the 3 preceding weeks deaths from enteric fever were one, 0 and 0; deaths from measles were 0, 2 and one; deaths from diphtheria were 2, one and 0; deaths from diarrhoea and enteritis of children under 2 years were one, 2 and 0; and deaths from influenza were one, one and 0. There were no deaths from whooping cough in the three preceding weeks.

Tuberculous disease caused 9 deaths (6 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from general tuberculosis) as against 4, 19 and 19 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 9 by diseases of the heart.

There were 14 deaths from pneumonia, comprising 7 from broncho-pneumonia, and 7 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

One accidental death was registered.

Among deaths of infants under one year old, one was due to meningitis, 2 were due to convulsions, 2 to broncho-pneumonia, 2 to pneumonia, 4 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation and 4 to congenital debility.

Forty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 22 being infants under one year, of whom 10 were under one month old, and 44 deaths were those of persons aged 65 years and upwards, of whom 32 were 70 years of age or over.

Of the 132 deaths recorded, 55 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 30th January in 105 large English towns (including London, in which the rate was 14·5) was equal to an average annual death-rate of 14·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·5 per 1,000 persons living, the rate for Glasgow being 16·1, and for Edinburgh 12·5.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·9 and 16·6; Dublin Registration Area, 16·6 and 16·2; Dublin County Borough, 16·4 and 16·3; Cork, 15·0 and 15·5; Limerick, 29·8 and 26·8; and Waterford, 17·1 and 16·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. One of the 22 deaths from all causes for Cork was from diphtheria; among the 22 deaths from all causes for Limerick were 5 from measles; and one of the 3 deaths for Wexford was from scarlet fever.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 182—86 boys and 96 girls—and the deaths to 151—77 males and 74 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·6 per 1,000 of the population. During the five weeks ending with Saturday last the death rate averaged 15·9 and was 4·7 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the five weeks was 17·6, and during the corresponding periods of the preceding ten years 22·1.

Included in the 141 deaths appertaining to the Area are one from measles, 2 from whooping cough, one from diphtheria, 4 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 2, one and 3; deaths from whooping cough were 0, 0 and one; deaths from diphtheria were one, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 2, 0 and 5; and deaths from influenza were one, 0 and 2.

One death from encephalitis lethargica and 2 deaths from cerebro-spinal meningitis were registered.

Tuberculous disease caused 20 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 7 from other forms of tuberculosis) as against 19, 19 and 9 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 13 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, and 2 from lobar pneumonia. Bronchitis caused 12 deaths.

Eight accidental deaths were registered, of which one (that of a child aged 4 years) was caused by burns, one (that of a child aged 1½ years) by scalds, 4 by drowning and 2 by motor vehicles.

Among deaths of infants under one year old, one was due to whooping cough, 2 were due to convulsions, 3 to bronchitis, 3 to broncho-pneumonia, 2 to diarrhoea and enteritis, 2 to premature birth, and 4 to congenital debility.

Forty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 20 being infants under one year, of whom 9 were under one month old, and 31 deaths were those of persons aged 65 years and upwards, of whom 17 were 70 years of age or over.

Of the 141 deaths recorded, 61 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 6th February in 105 large English towns (including London, in which the rate was 12·1) was equal to an average annual death-rate of 13·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·9 per 1,000 persons living, the rate for Glasgow being 16·4, and for Edinburgh 14·2.

\* See note at foot of fourth page.

\* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·3 and 16·3; Dublin Registration Area, 16·0 and 16·1; Dublin County Borough, 16·3 and 16·2; Cork, 15·0 and 15·5; Limerick, 20·3 and 25·1; and Waterford, 19·0 and 16·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·3 per 1,000. Among the 22 deaths from all causes for Cork were one from diphtheria and one from gastro-enteritis of a child under 2 years; among the 15 deaths from all causes for Limerick were one from measles and 2 from whooping cough; included in the 9 deaths for Drogheda were 3 from measles and one from whooping cough; and one of the 3 deaths for Tralee was also from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 205—107 boys and 98 girls—and the deaths to 150—86 males and 64 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·0 per 1,000 of the population. During the six weeks ending with Saturday last the death rate averaged 16·0 and was 4·5 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the six weeks was 17·6, and during the corresponding periods of the preceding ten years 22·1.

Included in the 136 deaths appertaining to the Area are one from measles, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the 3 preceding weeks deaths from measles were one, 3 and one; deaths from diphtheria were 0, one and one; deaths from diarrhoea and enteritis of children under 2 years were 0, 15 and 4; and deaths from influenza were 0, 2 and one.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis and 3 from other forms of tuberculosis) as against 19, 9 and 20 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 18 by diseases of the heart.

There were 20 deaths from pneumonia, comprising 15 from broncho-pneumonia, 2 from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

Three accidental deaths were registered, of which 2 (those of children aged 1½ and 3 years, respectively) were caused by scalds, and one by drowning. There were also 2 deaths by infanticide.

Among deaths of infants under one year old, one was due to tubercular peritonitis and one to meningitis, 3 were due to convulsions, 6 to bronchitis, 5 to broncho-pneumonia, one to pneumonia, 5 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation, and one to congenital debility.

Forty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 32 being infants under one year, of whom 8 were under one month old, and 38 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 136 deaths recorded, 49 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 13th February in 105 large English towns (including London, in which the rate was 12·2) was equal to an average annual death-rate of 12·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·5 per 1,000 persons living, the rate for Glasgow being 15·7, and for Edinburgh 12·9.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoea diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 13th February, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\*Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·9 and 16·7; Dublin Registration Area, 18·1 and 16·6; Dublin County Borough, 18·0 and 16·6; Cork, 10·9 and 14·0; Limerick, 23·0 and 27·1; and Waterford, 7·6 and 13·8.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·4 per 1,000. Among the 16 deaths from all causes for Cork were one from scarlet fever and one from gastro-enteritis of a child under 2 years; included in the 17 deaths from all causes for Limerick was one from measles; and one of the 6 deaths for Drogheda was from whooping-cough.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 201—106 boys and 95 girls—and the deaths to 172—94 males and 78 females.

The deaths registered, omitting the deaths (numbering 18) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 18·1 per 1,000 of the population. During the seven weeks ending with Saturday last the death rate averaged 16·3 and was 4·3 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the seven weeks was 18·0, and during the corresponding periods of the preceding ten years 22·2.

Included in the 154 deaths appertaining to the Area are 4 from measles, one from scarlet fever, one from whooping cough, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 3, one, and one; deaths from whooping cough were one, 2 and 0; deaths from diphtheria were one, one and one; deaths from diarrhoea and enteritis of children under 2 years were 5, 4 and 5; and deaths from influenza were 2, one and 2. There were no deaths from scarlet fever in the 3 preceding weeks.

Tuberculous disease caused 18 deaths (14 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from tuberculous arthritis) as against 9, 20 and 12 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 24 deaths from pneumonia, comprising 15 from broncho-pneumonia, 2 from lobar pneumonia and 7 from pneumonia (not otherwise defined). Bronchitis caused 18 deaths.

Three accidental deaths were registered, one of which was caused by drowning.

Among deaths of infants under one year old, one was due to whooping cough, 4 were due to convulsions, 3 to bronchitis, 11 to broncho-pneumonia, 2 to pneumonia, 5 to diarrhoea and enteritis, 2 to congenital malformation, and 8 to congenital debility.

Fifty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 37 being infants under one year, of whom 11 were under one month old, and 58 deaths were those of persons aged 65 years and upwards, of whom 44 were 70 years of age or over.

Of the 154 deaths recorded, 54 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 20th February in 105 large English towns (including London, in which the rate was 13·8) was equal to an average annual death-rate of 14·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·1 per 1,000 persons living, the rate for Glasgow being 15·7, and for Edinburgh 16·3.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 20th February, 1923, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1926. The estimate shown for London relates to the civil population in 1925. The populations given for Glasgow and Edinburgh are those estimated to the middle of 1926. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including one death from cerebro-spinal meningitis.

TABLE II. - Showing for the week ended Saturday, 20th February, 1926, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

TABLE IV.—Showing the NUMBER OF CASES of the undermentioned DISEASES treated in Dublin Hospitals during the week ended **Saturday, 20th February, 1926**, with the number under treatment at the close of each of the last four weeks. \*

DISEASES.	No. of Cases in Hospital at close of week ended			Week ended 20th February			
	Jan. 30	Feb. 6	Feb. 13	No. admitted.	Dis- charged.	Died.	No. under treatment at close of week.
Enteric Fever	5	6	6	3	1	.	8
Typhus	.	.	.	.	.	.	.
Small-pox	.	.	.	.	.	.	.
Measles	45	44	45	19	17	2	45
Scarlet Fever	122	115	120	19	21	.	118*
Diphtheria	39	46	44	9	4	3	46
Pneumonia	18	24	22	6	7	1	20

\* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

2adh lá de mhí Márta, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·5 and 16·7; Dublin Registration Area, 17·5 and 17·1; Dublin County Borough, 17·8 and 17·1; Cork, 9·5 and 12·6; Limerick, 20·3 and 23·4; and Waterford, 3·8 and 11·9.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·5 per 1,000. Among the 14 deaths from all causes for Cork was one from diphtheria; one of the 5 deaths for Drogheda was from measles; and included in the 4 deaths for Tralee were one from measles and one from influenza.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 252—117 boys and 135 girls—and the deaths to 166—85 males and 81 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17·5 per 1,000 of the population. During the eight weeks ending with Saturday last the death rate averaged 16·4 and was 4·6 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the eight weeks was 18·2, and during the corresponding periods of the preceding ten years 22·5.

Included in the 149 deaths appertaining to the Area are one from measles, one from scarlet fever, 2 from diarrhoea and enteritis of children under 2 years, and 4 from influenza. In the 3 preceding weeks deaths from measles were one, one and 4; deaths from scarlet fever were 0, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 4, 5 and 5; and deaths from influenza were one, 2 and one.

Tuberculous disease caused 18 deaths (11 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 6 from other forms of tuberculous disease) as against 20, 12 and 18 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 24 by diseases of the heart.

There were 15 deaths from pneumonia, comprising 9 from broncho-pneumonia, 2 from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 18 deaths.

Five accidental deaths were registered, one of which was caused by drowning, and one by a motor vehicle.

Among deaths of infants under one year old, one was due to tabes mesenterica, 2 were due to bronchitis, 6 to broncho-pneumonia, 2 to pneumonia, one to enteritis, 4 to premature birth and 4 to congenital debility.

Thirty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 8 were under one month old, and 42 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 149 deaths recorded, 50 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 27th February in 105 large English towns (including London, in which the rate was 12·8) was equal to an average annual death-rate of 13·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·3 per 1,000 persons living, the rate for Glasgow being 18·2, and for Edinburgh 16·6.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 27th February, 1923, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 20 patients in "Benavon," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chlárú Ghenearála,  
Baile Átha Cliath,  
9adh lá de mhí Márta, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·3 and 16·5; Dublin Registration Area, 16·5 and 17·0; Dublin County Borough, 16·6 and 17·2; Cork, 15·6 and 12·8; Limerick, 23·0 and 21·7; and Waterford, 11·4 and 10·5.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·6 per 1,000. Among the 23 deaths from all causes for Cork were one from whooping cough and one from gastro-enteritis of a child under 2 years; one of the 2 deaths for Dundalk, and one of the 5 deaths for Drogheda were from measles; and included in the 7 deaths for Tralee were 5 from measles and one from diphtheria.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 214—110 boys and 104 girls—and the deaths to 156—75 males and 81 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·5 per 1,000 of the population. During the nine weeks ending with Saturday last the death rate averaged 16·4 and was 4·9 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the nine weeks was 18·2, and during the corresponding periods of the preceding ten years 22·9.

Included in the 140 deaths appertaining to the Area are one from enteric fever, one from measles, 3 from diphtheria, 5 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were one, 4 and one; deaths from diphtheria were one, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 5, 5 and 2; and deaths from influenza were 2, one and 4. There were no deaths from enteric fever in the 3 preceding weeks.

Tuberculous disease caused 11 deaths (10 of which were from pulmonary tuberculosis, and one from tuberculosis of the spine) as against 12, 18 and 18 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 6 from broncho-pneumonia, 3 from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

Four accidental deaths were registered.

Among deaths of infants under one year old, one was due to measles and one to meningitis, 3 were due to convulsions, 3 to bronchitis, 3 to broncho-pneumonia, one to lobar pneumonia, one to pneumonia, 4 to diarrhoea and enteritis, 7 to premature birth, 2 to congenital malformation and 4 to congenital debility.

Forty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 34 being infants under one year, of whom 9 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 140 deaths recorded, 58 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 6th March in 105 large English towns (including London, in which the rate was 12·5) was equal to an average annual death-rate of 12·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·8 per 1,000 persons living, the rate for Glasgow being 15·4, and for Edinburgh 19·6.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 6th March, 1926**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1926. The estimate shown for London relates to the civil population in 1925. The populations given for Glasgow and Edinburgh are those estimated to the middle of 1926. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including 1 death from cerebro-spinal meningitis.

TABLE II.—Showing for the week ended Saturday, 6th March, 1926, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,\* the annual rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 18 patients in "Benavén," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,  
16adh lá de mhí Márta, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·9 and 16·2; Dublin Registration Area, 15·7 and 17·0; Dublin County Borough, 16·8 and 17·3; Cork, 12·9 and 12·2; Limerick, 12·2 and 19·6; and Waterford, 5·7 and 7·1.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·6 per 1,000. One of the 3 deaths from all causes for Drogheda was from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 210—120 boys and 90 girls—and the deaths to 142—66 males and 76 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population. During the ten weeks ending with Saturday last the death rate averaged 16·4 and was 5·2 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the ten weeks was 18·1, and during the corresponding periods of the preceding ten years 23·3.

Included in the 133 deaths appertaining to the Area are one from measles, one from scarlet fever, one from whooping cough, 2 from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and one from influenza. In the three preceding weeks deaths from measles were 4, one, and one; deaths from scarlet fever were one, one and 0; deaths from whooping-cough were one, 0 and 0; deaths from diphtheria were one, 0 and 3; deaths from diarrhoea and enteritis of children under 2 years were 5, 2 and 5; and deaths from influenza were one, 4 and one.

Tuberculous disease caused 17 deaths (11 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis, and 2 from tuberculous peritonitis) as against 18, 18 and 11 from all forms of tuberculosis in the three weeks preceding.

Sixteen deaths were caused by cancer, and 12 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 14 deaths.

One accidental death (that of a child aged 2 years), due to burns, was registered, and there was also one death by suicide.

Among deaths of infants under one year old, one was due to measles, one to whooping-cough and one to meningitis, 3 were due to convulsions, 5 to bronchitis, 2 to broncho-pneumonia, 2 to pneumonia, one to diarrhoea and enteritis, 2 to premature birth, one to congenital malformation and 3 to congenital debility.

Thirty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 22 being infants under one year, of whom 4 were under one month old, and 30 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 133 deaths recorded, 52 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 13th March in 105 large English towns (including London, in which the rate was 12·6) was equal to an average annual death-rate of 12·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·1 per 1,000 persons living, the rate for Glasgow being 15·4, and for Edinburgh 17·9

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 13th March, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 County Boroughs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY County Boroughs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chláirí Ghenearála,  
Baile Átha Cliath,  
23adh lá de mhí Márta, 1926.*

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·8 and 15·6; Dublin Registration Area, 13·9 and 15·9; Dublin County Borough, 13·5 and 16·2; Cork, 19·0 and 14·3; Limerick, 27·1 and 20·7; and Waterford, 13·3 and 8·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·5 per 1,000. Among the 28 deaths from all causes for Cork were 2 from whooping-cough; included in the 20 deaths for Limerick were one from measles and 3 from whooping-cough; and one of the 3 deaths for Drogheda and one of the 6 deaths for Tralee were from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 190—104 boys and 86 girls—and the deaths to 131—74 males and 57 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·9 per 1,000 of the population. During the eleven weeks ending with Saturday last the death rate averaged 16·1 and was 5·7 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the eleven weeks was 17·8, and during the corresponding periods of the preceding ten years 23·5.

Included in the 118 deaths appertaining to the Area are one from enteric fever, one from measles, 2 from whooping cough, 3 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the three preceding weeks deaths from enteric fever were 0, one and 0; deaths from measles were one, one, and one; deaths from whooping-cough were 0, 0 and one; deaths from diphtheria were 0, 3 and 2; deaths from diarrhoea and enteritis of children under 2 years were 2, 5 and one; and deaths from influenza were 4, one and one.

Tuberculous disease caused 17 deaths (11 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 3 from other forms of tuberculosis) as against 18, 11 and 17 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 19 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia and 6 from pneumonia (not otherwise defined). Bronchitis caused 9 deaths.

Four accidental deaths were registered, of which 2 (both of children aged 2 years) were caused by burns, one (that of a child aged 3 years) by scalds, and one by a motor vehicle.

Among deaths of infants under one year old, one was due to whooping-cough, 2 were due to diphtheria, one to tuberculous meningitis, one to convulsions, one to bronchitis, 3 to broncho-pneumonia, 4 to pneumonia, 3 to diarrhoea and enteritis, one to premature birth, and one to congenital malformation.

Thirty-three of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 4 were under one month old, and 29 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 118 deaths recorded, 45 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 20th March in 105 large English towns (including London, in which the rate was 13·1) was equal to an average annual death-rate of 12·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·5 per 1,000 persons living, the rate for Glasgow being 18·1, and for Edinburgh 17·1.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 20th March, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHS OR URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1. and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 12. VOL. LXIII.]      WEEK ENDED SATURDAY, 27TH MARCH, 1926.      [PRICE 1½d. NET.

---

*Oifig um Chláirí Ghenearála,  
Baile Átha Cliath,  
30adh lá de mhí Márta, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·5 and 16·6; Dublin Registration Area, 15·7 and 15·5; Dublin County Borough, 17·1 and 16·0; Cork, 18·4 and 16·5; Limerick, 13·5 and 19·0; and Waterford, 22·8 and 13·3.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·9 per 1,000. Four of the 10 deaths from all causes for Limerick and 2 of the 12 deaths from all causes for Waterford were from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 201—114 boys and 87 girls—and the deaths to 152—77 males and 75 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population. During the twelve weeks ending with Saturday last the death rate averaged 16·1 and was 5·9 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the twelve weeks was 17·8, and during the corresponding periods of the preceding ten years 23·7.

Included in the 133 deaths appertaining to the Area are one from enteric fever, one from measles, 2 from whooping cough, 2 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from enteric fever were one, 0, and one; deaths from measles were one, one, and one; deaths from whooping-cough were 0, one and 2; deaths from diarrhoea and enteritis of children under 2 years were 5, one and 3; and deaths from influenza were one, one and 2.

Tuberculous disease caused 17 deaths (12 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 2 from general tuberculosis) as against 11, 17 and 17 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer, and 9 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 4 from broncho-pneumonia, 3 from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 22 deaths.

Four accidental deaths were registered, of which one (that of a child aged 4 years) was caused by scalds, and one by drowning.

Among deaths of infants under one year old, 2 were due to whooping-cough, one to specific disease, 2 to meningitis, one to bronchitis, 3 to broncho-pneumonia, one to lobar pneumonia, 2 to diarrhoea and enteritis, 4 to premature birth, and 3 to congenital debility.

Twenty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 6 were under one month old, and 35 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 133 deaths recorded, 57 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 27th March in 105 large English towns (including London, in which the rate was 13·9) was equal to an average annual death-rate of 13·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17·9 per 1,000 persons living, the rate for Glasgow being 23·7, and for Edinburgh 17·3.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Showing the NUMBER OF CASES OF INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 27th March, 1926**, and during each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·9 and 15·8; Dublin Registration Area, 16·4 and 15·4; Dublin County Borough, 17·5 and 16·2; Cork, 19·0 and 17·3; Limerick, 19·0 and 18·0; and Waterford, 15·2 and 14·3.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. One of the 14 deaths from all causes for Limerick was from whooping-cough; included in the 8 deaths from all causes for Waterford were one from measles and one from gastro-enteritis of a child under 2 years; one of the 4 deaths for Dundalk was from enteric fever; among the 10 deaths for Drogheda were 2 from measles and one from whooping-cough; and one of the 3 deaths for Sligo was from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 256—117 boys and 139 girls—and the deaths to 151—78 males and 73 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·4 per 1,000 of the population. During the thirteen weeks ending with Saturday last the death rate averaged 16·1 and was 5·8 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the thirteen weeks was 17·8, and during the corresponding periods of the preceding ten years 23·6.

Included in the 139 deaths appertaining to the Area are one from measles, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from measles were one, one, and one; deaths from diphtheria were 2, 3 and 0; deaths from diarrhoea and enteritis of children under 2 years were one, 3 and 2; and deaths from influenza were one, 2 and one.

Tuberculous disease caused 18 deaths (all of which were from pulmonary tuberculosis) as against 17, 17, and 17 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 22 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

No accidental deaths were registered.

Among deaths of infants under one year old, one was due to influenza, one to convulsions, one to bronchitis, 2 to broncho-pneumonia, 4 to diarrhoea and enteritis, 5 to premature birth, and 3 to congenital malformation.

Thirty-three of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 12 were under one month old, and 43 deaths were those of persons aged 65 years and upwards, of whom 33 were 70 years of age or over.

Of the 139 deaths recorded, 66 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 3rd April in 105 large English towns (including London, in which the rate was 15·2) was equal to an average annual death-rate of 15·0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 22·4 per 1,000 persons living, the rate for Glasgow being 31·0, and for Edinburgh 12·6.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the week ended Saturday, 3rd April, 1923, the number of Deaths of Residents of several Districts comprising the Dublin Registration Area, and the County Borough of Cork,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby; and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,  
13adh lá de mhí Aibreáin, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·8 and 16·0; Dublin Registration Area, 14·5 and 15·1; Dublin County Borough, 15·2 and 15·8; Cork, 18·4 and 18·7; Limerick, 16·2 and 19·0; and Waterford, 24·7 and 19·0.

The deaths from the principal epidemic diseases, recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·9 per 1,000. One of the 27 deaths from all causes for Cork was from enteric fever; included in the 13 deaths from all causes for Waterford were 3 from measles; and one of the 4 deaths for Drogheda was from enteric fever.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 206—95 boys and 111 girls—and the deaths to 142—70 males and 72 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·5 per 1,000 of the population. During the fourteen weeks ending with Saturday last the death rate averaged 16·0 and was 6·0 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the fourteen weeks was 17·7, and during the corresponding periods of the preceding ten years 23·7.

Included in the 123 deaths appertaining to the Area are 2 from measles, one from scarlet fever, one from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and 3 from influenza. In the three preceding weeks deaths from measles were one, one, and one; deaths from diphtheria were 3, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 3, 2 and 5; and deaths from influenza were 2, one and one.

Tuberculous disease caused 11 deaths (all of which were from pulmonary tuberculosis) as against 17, 17, and 18 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 22 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 4 from broncho-pneumonia, 3 from lobar pneumonia and 5 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

One accidental death, due to drowning, was registered.

Among deaths of infants under one year old, 3 were due to meningitis, one to pneumonia, one to diarrhoea and enteritis, one to premature birth, and 2 to congenital malformation.

Twenty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 10 being infants under one year, of whom 4 were under one month old, and 41 deaths were those of persons aged 65 years and upwards, of whom 31 were 70 years of age or over.

Of the 123 deaths recorded, 52 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 10th April in 105 large English towns (including London, in which the rate was 15·3) was equal to an average annual death-rate of 15·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 21·0 per 1,000 persons living, the rate for Glasgow being 25·6, and for Edinburgh 14·1.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 10th April, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Pneumonia	17	17	26	3	5	1	23

\* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·5 and 16·2; Dublin Registration Area, 13·7 and 15·1; Dublin County Borough, 14·1 and 16·0; Cork, 15·6 and 17·9; Limerick, 36·6 and 21·3; and Waterford, 34·2 and 24·2.

The deaths from the principal epidemic diseases, recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·7 per 1,000. Two of the 23 deaths from all causes for Cork were from whooping-cough; and one of the 27 deaths for Limerick, 3 of the 18 deaths for Waterford, and one of the 5 deaths for Drogheda were from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 285—137 boys and 148 girls—and the deaths to 136—72 males and 64 females.

The deaths registered, omitting the deaths (numbering 20) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·7 per 1,000 of the population. During the fifteen weeks ending with Saturday last the death rate averaged 15·8 and was 6·2 below the mean rate for the corresponding portions of the ten years 1916—25. The rate for all deaths registered during the fifteen weeks was 17·6, and during the corresponding periods of the preceding ten years 23·7.

Included in the 116 deaths appertaining to the Area are 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 2, 5 and 3.

Tuberculous disease caused 15 deaths (9 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 4 from other forms of tuberculous disease) as against 17, 18, and 11 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 10 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 8 from broncho-pneumonia, 2 from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 14 deaths.

Three accidental deaths were registered, of which one (that of a child aged one year) was caused by burns and one by a motor vehicle.

Among deaths of infants under one year old, one was due to specific disease, 4 were due to convulsions, 2 to bronchitis, 4 to broncho-pneumonia, 2 to diarrhoea and enteritis, 4 to premature birth, and 3 to congenital debility.

Thirty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 24 being infants under one year, of whom 11 were under one month old, and 32 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 116 deaths recorded, 49 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 17th April in 105 large English towns (including London, in which the rate was 14·3) was equal to an average annual death-rate of 14·3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 20·8 per 1,000 persons living, the rate for Glasgow being 22·8, and for Edinburgh 15·1.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

\* Exclusive of 16 patients in "Benenvin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·1 and 16·1; Dublin Registration Area, 14·9 and 14·9; Dublin County Borough, 14·9 and 15·4; Cork, 24·5 and 19·4; Limerick, 16·2 and 22·0; and Waterford, 13·3 and 21·9.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·5 per 1,000. Four of the 36 deaths from all causes for Cork were from whooping-cough and one from influenza; of the 12 deaths for Limerick, one was from measles, one from influenza and one from diarrhoea and enteritis of a child under 2 years; of the 7 deaths for Waterford 4 were from measles, one from scarlet fever and one from diarrhoea and enteritis of a child under 2 years, and of the 5 deaths for Sligo one was from whooping cough and one from diarrhoea and enteritis of a child under 2 years.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 245—127 boys and 118 girls—and the deaths to 141—71 males and 70 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·9 per 1,000 of the population. During the sixteen weeks ending with Saturday last the death rate averaged 15·8 and was 6·2 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the sixteen weeks was 17·6, and during the corresponding periods of the preceding ten years 23·7.

Included in the 127 deaths appertaining to the Area are one from measles, one from diphtheria, 2 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from measles were one, 2 and 0; deaths from diphtheria were one, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 5, 3 and 2 and deaths from influenza were one, 3 and 0.

Tuberculous disease caused 19 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 6 from other forms of tuberculous disease) as against 18, 11, and 15 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 19 by diseases of the heart.

There were 8 deaths from pneumonia, comprising one from broncho-pneumonia, 3 from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

Two accidental deaths were registered, of which one was caused by a motor vehicle.

Among deaths of infants under one year old, 2 were due to convulsions, 4 to bronchitis, 2 to diarrhoea and enteritis, 6 to premature birth, one to congenital malformation, and 5 to congenital debility.

Twenty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 10 were under one month old, and 38 deaths were those of persons aged 65 years and upwards, of whom 35 were 70 years of age or over.

Of the 127 deaths recorded, 49 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 24th April in 105 large English towns (including London, in which the rate was 12·8) was equal to an average annual death-rate of 13·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17·1 per 1,000 persons living, the rate for Glasgow being 17·9, and for Edinburgh 13·8.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

\* Exclusive of 19 patients in "Benavén," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 17. VOL. LXIII.]

WEEK ENDED SATURDAY, 1ST MAY, 1926.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghenearála,*

*Baile Átha Cliath,*

*Audh lá de mhí Bealtaine, 1926.*

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·9 and 15·8; Dublin Registration Area, 15·7 and 14·7; Dublin County Borough, 16·3 and 15·1; Cork, 18·4 and 19·2; Limerick, 17·6 and 21·7; and Waterford, 15·2 and 21·9.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. One of the 13 deaths from all causes for Limerick was from whooping-cough and one from diarrhoea and enteritis of a child under 2 years; of the 8 deaths for Waterford 2 were from measles and one from diarrhoea and enteritis of a child under 2 years, and of the 4 deaths for Kilkenny one was from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 193—98 boys and 95 girls—and the deaths to 150—77 males and 73 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population. During the seventeen weeks ending with Saturday last the death rate averaged 15·8 and was 5·9 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the seventeen weeks was 17·6, and during the corresponding periods of the preceding ten years 23·4.

Included in the 133 deaths appertaining to the Area are 2 from measles, 2 from whooping-cough, 3 from diarrhoea and enteritis of children under 2 years, and 3 from influenza. In the three preceding weeks deaths from measles were 2, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 3, 2 and 2, and deaths from influenza were 3, 0 and one. There were no deaths from whooping-cough in the three preceding weeks.

Tuberculous disease caused 17 deaths (14 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from other forms of tuberculous disease) as against 11, 15, and 19 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 14 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

Two accidental deaths were registered, of which one was caused by drowning, and one (that of a child aged eleven months) was due to scalds.

Among deaths of infants under one year old, one was due to measles, one to whooping-cough, one to convulsions, 2 to broncho-pneumonia, 3 to diarrhoea and enteritis, 8 to premature birth and 3 to congenital malformation.

Thirty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 10 were under one month old, and 35 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 133 deaths recorded, 56 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 1st May in 105 large English towns (including London, in which the rate was 12·6) was equal to an average annual death-rate of 12·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·9 per 1,000 persons living, the rate for Glasgow being 16·7, and for Edinburgh 12·3.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 1st May, 1926**, in relation to the **DUBLIN REGISTRATION AREA**, to each of the under-mentioned 11 **COUNTY BOROUGHs** or **URBAN DISTRICTs**, and to **BELFAST** and **LONDONDERRY COUNTY BOROUGHs**; the Number of Deaths from some of the **PRINCIPAL CAUSES**, and the Number of **Uncertified Deaths**, with the **Meteorology** for the week; also particulars regarding **Births, Deaths and Meteorology** for **London, Edinburgh, and Glasgow**.

[illegible]

TABLE 11.—Showing for the week ended **Saturday, 1st May, 1926**, the number of **DEATHS** of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, \* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, *the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.*

[illegible]

\* See note at foot of fourth page.

The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

† See note (†) at foot of first page.

TABLE III.—Showing the NUMBER OF CASES OF INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 1st May, 1926**, and during each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 18. VOL. LXIII.]

WEEK ENDED SATURDAY, 8TH MAY, 1926.

[PRICE 1½d. NET.]

*Oifig um Chláirú Ghenearálta,*

*Baile Átha Cliath,*

*11adh lá de mhí Bealtaine, 1926.*

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·9 and 15·6; Dublin Registration Area, 12·8 and 14·3; Dublin County Borough, 13·2 and 14·6; Cork, 23·8 and 20·6; Limerick, 25·7 and 24·0; and Waterford, 17·1 and 20·0.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. One of the 35 deaths from all causes for Cork was from whooping-cough; of the 9 deaths for Waterford 4 were from measles; and of the 2 deaths for Kilkenny one was from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 297—154 boys and 143 girls—and the deaths to 117—59 males and 58 females.

The deaths registered, omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·8 per 1,000 of the population. During the eighteen weeks ending with Saturday last the death rate averaged 15·6 and was 6·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the eighteen weeks was 17·4, and during the corresponding periods of the preceding ten years 23·3.

Included in the 109 deaths appertaining to the Area are one from measles, one from scarlet fever, one from whooping-cough, 2 from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and 2 from influenza. In the three preceding weeks deaths from measles were 0, one and 2; deaths from whooping-cough were 0, 0 and 2; deaths from diphtheria were 0, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 3, and deaths from influenza were 0, one and 3. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 13 deaths (7 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and five from other forms of tuberculous disease) as against 15, 19, and 17 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 14 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 9 deaths.

There were no deaths from violence registered.

Among deaths of infants under one year old, one was due to measles, 3 to convulsions, one to bronchitis, 4 to broncho-pneumonia, one to pneumonia not otherwise defined, one to diarrhoea and enteritis, 3 to premature birth, 7 to congenital debility, and 3 to congenital malformation.

Thirty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 26 being infants under one year, of whom 12 were under one month old, and 23 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 109 deaths recorded, 39 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

*Returns for week ended 8th May not received in time for press.*

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the week ended Saturday, 8th May, 1926, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·2 and 15·5; Dublin Registration Area, 14·4 and 14·5; Dublin County Borough, 15·2 and 14·9; Cork, 21·1 and 22·0; Limerick, 14·9 and 18·6; and Waterford, 13·3 and 14·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·5 per 1,000. One of the 31 deaths from all causes for Cork was from scarlet fever, 2 were from whooping-cough, and one from diarrhoea and enteritis of a child under 2 years; of the 11 deaths for Limerick one was from diarrhoea and enteritis of a child under 2 years; and of the 7 deaths for Waterford 3 were from measles, and one from scarlet fever.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 230—114 boys and 116 girls—and the deaths to 131—70 males and 61 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·4 per 1,000 of the population. During the nineteen weeks ending with Saturday last the death rate averaged 15·6 and was 5·9 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the nineteen weeks was 17·3, and during the corresponding period of the preceding ten years 23·2.

Included in the 122 deaths appertaining to the Area are one from typhus fever, 3 from measles, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the three preceding weeks deaths from measles were one, 2 and one; deaths from diphtheria were one, 0 and 2; deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and one, and deaths from influenza were one, 3 and 2. There were no deaths from typhus registered in the three preceding weeks.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, and 4 from other forms of tuberculous disease) as against 19, 17, and 13 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 20 by diseases of the heart.

There were 4 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 15 deaths.

One accidental death due to burns was registered, and there was also one death by suicide.

Among deaths of infants under one year old, 2 were due to meningitis, one to convulsions, one to bronchitis, one to broncho-pneumonia, 4 to diarrhoea and enteritis, 3 to premature birth, and 2 to congenital debility.

Twenty-three of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 14 being infants under one year, of whom 5 were under one month old, and 42 deaths were those of persons aged 65 years and upwards, of whom 31 were 70 years of age or over.

Of the 122 deaths recorded, 58 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 15th May in 105 large English towns (including London, in which the rate was 10·3) was equal to an average annual death-rate of 11·4 per 1,000 of the estimated civil population.

The average death-rate for Glasgow was 14·6, and for Edinburgh 13·1 per 1000 persons living.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 15th May, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the under-mentioned 11 COUNTY BOROWHS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROWHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 22 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·5 and 15·4; Dublin Registration Area, 15·5 and 14·6; Dublin County Borough, 16·3 and 15·3; Cork, 16·3 and 19·9; Limerick, 21·7 and 20·0; and Waterford, 13·3 and 14·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. Two of the 24 deaths from all causes for Cork were from whooping-cough, and 3 were from influenza; included in the 16 deaths for Limerick were one from enteric fever and 5 from influenza; while one of the 7 deaths for Waterford and 2 of the 3 deaths for Kilkenny were from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 236—117 boys and 119 girls—and the deaths to 151—73 males and 78 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·5 per 1,000 of the population. During the twenty weeks ending with Saturday last the death rate averaged 15·6 and was 5·7 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty weeks was 17·3, and during the corresponding period of the preceding ten years 23·1.

Included in the 132 deaths appertaining to the Area are 3 from measles, one from whooping-cough and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 2, one and 3; deaths from whooping-cough were 2, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 3, one and 5.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, and 4 from other forms of tuberculous disease) as against 17, 13, and 13 from all forms of tuberculosis in the three weeks preceding.

Four deaths were caused by cancer, and 20 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 6 from broncho-pneumonia, 2 from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 16 deaths.

Two accidental deaths were registered, one of which was caused by a motor vehicle.

Among deaths of infants under one year old, one was due to measles, one to convulsions, 2 to bronchitis, one to broncho-pneumonia, 3 to diarrhoea and enteritis, 8 to premature birth, 3 to congenital malformation and 5 to congenital debility.

Thirty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 25 being infants under one year, of whom 14 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 26 were 70 years of age or over.

Of the 132 deaths recorded, 46 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 22nd May in 105 large English towns (including London, in which the rate was 11·4) was equal to an average annual death-rate of 12·0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·5 per 1000 persons living, the rate for Glasgow being 14·2, and for Edinburgh 13·6.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 22nd May, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTs, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Pneumonia	19	16	23	9	3	.	29

\* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·3 and 15·0; Dublin Registration Area, 12·6 and 13·8; Dublin County Borough, 11·8 and 14·1; Cork, 20·4 and 20·4; Limerick, 23·0 and 21·3; and Waterford, 19·0 and 15·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. Two of the 30 deaths from all causes for Cork were from whooping-cough; included in the 17 deaths for Limerick were one from measles and one from diarrhoea and enteritis of a child under 2 years; while 4 of the 10 deaths for Waterford and one of the 3 deaths for Clonmel were from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 175—92 boys and 83 girls—and the deaths to 117—61 males and 56 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·6 per 1,000 of the population. During the twenty-one weeks ending with Saturday last the death rate averaged 15·4 and was 5·7 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-one weeks was 17·1, and during the corresponding periods of the preceding ten years 22·8.

Included in the 107 deaths appertaining to the Area are 3 from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and 3 from influenza. In the three preceding weeks deaths from diphtheria were 2, one and 0; deaths from diarrhoea and enteritis of children under 2 years were one, 5 and 3; and deaths from influenza were 2, 2 and 0.

One death from cerebro-spinal meningitis was registered.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from general tuberculosis) as against 13, 13, and 15 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 4 from broncho-pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 14 deaths.

Three accidental deaths were registered, one of which was caused by drowning and one by a motor vehicle, and there was also one death by suicide.

Among deaths of infants under one year old, one was due to diphtheria, one to cerebro-spinal meningitis, 2 to pneumonia, one to broncho-pneumonia, one to diarrhoea and enteritis, 3 to premature birth, and 4 to congenital debility.

Twenty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 16 being infants under one year, of whom 8 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 17 were 70 years of age or over.

Of the 107 deaths recorded, 49 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 29th May in 105 large English towns (including London, in which the rate was 10·3) was equal to an average annual death-rate of 11·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·6 per 1000 persons living, the rate for Glasgow being 14·0, and for Edinburgh 13·3.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 29th May, 1926, the number of DEATHS of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 13·6 and 14·7; Dublin Registration Area, 12·9 and 13·9; Dublin County Borough, 13·1 and 14·1; Cork, 15·0 and 18·2; Limerick, 9·5 and 17·3; and Waterford, 28· and 18·5.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·9 per 1,000. One of the 7 deaths from all causes for Limerick was from whooping-cough; and 3 of the 15 deaths for Waterford and one of the 3 deaths for Dundalk were from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 299—152 boys and 147 girls—and the deaths to 124—62 males and 62 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·9 per 1,000 of the population. During the twenty-two weeks ending with Saturday last the death rate averaged 15·3 and was 5·6 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-two weeks was 17·0, and during the corresponding periods of the preceding ten years 22·6.

Included in the 110 deaths appertaining to the Area are one from measles, 3 from diphtheria, and 2 from influenza. In the three preceding weeks deaths from measles were 3, 3 and 0; deaths from diphtheria were one, 0 and 3; and deaths from influenza were 2, 0 and 3.

One death from encephalitis lethargica was registered.

Tuberculous disease caused 19 deaths (14 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 4 from other forms of tuberculosis) as against 13, 15, and 14 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 4 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia and 6 from pneumonia (not otherwise defined). Bronchitis caused 15 deaths.

Two accidental deaths were registered, one of which was caused by drowning, and there was also one death by homicide.

Among deaths of infants under one year old, one was due to diphtheria, one to influenza, one to tuberculous peritonitis, one to general tuberculosis, 2 to convulsions, 2 to bronchitis, 2 to premature birth, and 2 to congenital debility.

Twenty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 14 being infants under one year, of whom 6 were under one month old, and 27 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 110 deaths recorded, 51 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 5th June in 105 large English towns (including London, in which the rate was 9·4) was equal to an average annual death-rate of 10·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·1 per 1000 persons living, the rate for Glasgow being 12·7, and for Edinburgh 13·3.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 5th June, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1926. The estimate shown for London relates to the civil population in 1925. The populations given for Glasgow and Edinburgh are those estimated to the middle of 1926. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including one death from cerebro-spinal meningitis.

TABLE II.—Showing for the week ended **Saturday, 5th June, 1926**, the number of Deaths of Residents of the several Districts comprising the Dublin Registration Area, and the County Borough of Cork, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

REGISTRARS' DISTRICTS, &c.		ESTI- MATED POPU- LATION OF MIDDLE 1926†.	ANNUAL RATE OF MORTALITY PER 1,000 LIVING REPRESENTED BY DEATHS.		TOTAL DEATHS.	CAUSED BY												IN INSTITU- TIONS.																		
			FROM PRIN- CIPAL CAUSES			Under 1 year.	1 and under 2.	2 and under 5.	5 and under 15.	15 and under 25.	25 and under 45.	45 and under 65.	65 and upwards.	Enteric Fever.	Typhus.	Small-pox. Diphtheria ... ..	61	49	45	14	9	3	47
Pneumonia ... ..	23	29	29	13	7	2	33

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*By Authority of the Registrar-General.*

To be purchased through any Bookseller or directly from  
 EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 23. VOL. LXIII.]

WEEK ENDED SATURDAY, 12TH JUNE, 1926.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghinearálta,*

*Baile Átha Cliath,*

15adh lá de mhí Meitheamh, 1926.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·8 and 14·8; Dublin Registration Area, 16·4 and 14·4; Dublin County Borough, 15·8 and 14·3; Cork, 12·9 and 16·2; Limerick, 20·3 and 18·6; and Waterford, 15·2 and 19·0.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·8 per 1,000. Three of the 19 deaths from all causes for Cork, and one of the 15 deaths for Limerick were from whooping-cough; and one of the 5 deaths for Kilkenny was from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 203—107 boys and 99 girls—and the deaths to 152—76 males and 76 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·4 per 1,000 of the population. During the twenty-three weeks ending with Saturday last the death rate averaged 15·3 and was 5·3 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-three weeks was 17·0, and during the corresponding periods of the preceding ten years 22·3.

Included in the 139 deaths appertaining to the Area are one from measles, 3 from diarrhoea and enteritis of children under 2 years, and 5 from influenza. In the three preceding weeks deaths from measles were 3, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 3, one and 0; and deaths from influenza were 0, 3 and 2.

Tuberculous disease caused 23 deaths (16 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis, and 3 from general tuberculosis) as against 15, 14, and 19 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 12 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 8 from broncho-pneumonia, and 9 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

One accidental death and one death by suicide were registered.

Among deaths of infants under one year old, one was due to influenza, one to general tuberculosis, 2 to meningitis, one to broncho-pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation, and 2 to congenital debility.

Thirty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 3 were under one month old, and 38 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 139 deaths recorded, 59 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 12th June in 105 large English towns (including London, in which the rate was 9·3) was equal to an average annual death-rate of 9·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·8 per 1000 persons living, the rate for Glasgow being 12·8, and for Edinburgh 12·4.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 12th June, 1926, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

Pneumonia	29	29	33	9	9	.	33

\* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,  
22adh lá de mhí Meitheamh, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·8 and 14·1; Dublin Registration Area, 13·1 and 13·8; Dublin County Borough, 14·0 and 13·7; Cork, 17·0 and 16·3; Limerick, 13·5 and 16·6; and Waterford, 17·1 and 20·0.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·6 per 1,000. One of the 25 deaths from all causes for Cork was from whooping-cough; one of the 9 deaths for Waterford was from measles, and 2 were from diarrhoea and enteritis of children under 2 years; and one of the 2 deaths for Dundalk was from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 260—124 boys and 136 girls—and the deaths to 120—62 males and 58 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·1 per 1,000 of the population. During the twenty-four weeks ending with Saturday last the death rate averaged 15·3 and was 5·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-four weeks was 17·0, and during the corresponding periods of the preceding ten years 22·1.

Included in the 111 deaths appertaining to the Area are 3 from diarrhoea and enteritis of children under 2 years, and 4 from influenza. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were one, 0, and 3; and deaths from influenza were 3, 2, and 5.

Tuberculous disease caused 17 deaths (13 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 14, 19, and 23 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 12 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

Four accidental deaths were registered, of which 2 were by drowning and 2 by motor vehicles, and there was also one death by homicide.

Among deaths of infants under one year old, 3 were due to convulsions, one to bronchitis, one to broncho-pneumonia, one to pneumonia (not otherwise defined), 2 to diarrhoea and enteritis, 5 to premature birth, 2 to congenital malformation, and one to congenital debility.

Twenty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 16 being infants under one year, of whom 11 were under one month old, and 22 deaths were those of persons aged 65 years and upwards, of whom 14 were 70 years of age or over.

Of the 111 deaths recorded, 51 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 19th June in 105 large English towns (including London, in which the rate was 8·7) was equal to an average annual death-rate of 9·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·0 per 1000 persons living, the rate for Glasgow being 12·1, and for Edinburgh 12·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 19th June, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 22 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

 Baile Átha Cliath,  
 29adh lá de mhí Meitheamh, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·5 and 13·7; Dublin Registration Area, 11·3 and 13·4; Dublin County Borough, 11·8 and 13·7; Cork, 13·6 and 14·6; Limerick, 19·0 and 15·6; and Waterford, 19·0 and 20·0.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. One of the 20 deaths from all causes for Cork was from whooping-cough and 3 of the 10 deaths for Waterford and one of 5 deaths for Kilkenny, were from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 296—159 boys and 137 girls—and the deaths to 103—52 males and 51 females.

The deaths registered, omitting the deaths (numbering 7) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·3 per 1,000 of the population. During the twenty-five weeks ending with Saturday last the death rate averaged 15·1 and was 5·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-five weeks was 16·7, and during the corresponding periods of the preceding ten years 21·8.

Included in the 96 deaths appertaining to the Area are 2 from measles, one from whooping-cough, one from diphtheria, 2 from diarrhoea and enteritis of children under 2 years, and 5 from influenza. In the three preceding weeks deaths from measles were one, one and 0; deaths from diphtheria were 3, 0, and 0; deaths from diarrhoea and enteritis of children under 2 years were 0, 3, and 3; and deaths from influenza were 2, 5, and 4; there were no deaths from whooping cough in the 3 preceding weeks.

Tuberculous disease caused 9 deaths (7 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculosis of joints) as against 19, 23, and 17 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 11 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

Two accidental deaths were registered (one of which that of a child aged 2 years and 4 months) was due to scalds.

Among deaths of infants under one year old, one was due to whooping-cough, 4 to convulsions, one to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation, and one to congenital debility.

Twenty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 12 being infants under one year, of whom 7 were under one month old, and 30 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 96 deaths recorded, 34 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 26th June in 105 large English towns (including London, in which the rate was 9·1) was equal to an average annual death-rate of 9·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·2 per 1000 persons living the rate for Glasgow being 10·6, and for Edinburgh 13·9.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 26th June, 1926**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·8 and 13·5; Dublin Registration Area, 13·4 and 13·6; Dublin County Borough, 12·0 and 13·4; Cork, 15·0 and 14·6; Limerick, 9·5 and 15·6; and Waterford, 9·5 and 15·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·8 per 1,000. One of the 22 deaths from all causes for Cork was from typhus; the one death registered for Dundalk was from measles, and of 4 deaths for Tralee one was from diphtheria.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 221—124 boys and 97 girls—and the deaths to 133—68 males and 65 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·4 per 1,000 of the population. During the twenty-six weeks ending with Saturday last the death rate averaged 15·0 and was 4·8 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-six weeks was 16·7, and during the corresponding periods of the preceding ten years 21·6.

Included in the 114 deaths appertaining to the Area are 2 from measles, 2 from diphtheria, 4 from diarrhoea and enteritis of children under 2 years, and 4 from influenza. In the three preceding weeks deaths from measles were one, 0 and 2; deaths from diphtheria were 0, 0, and one; deaths from diarrhoea and enteritis of children under 2 years were 3, 3, and 2; and deaths from influenza were 5, 4, and 5.

Tuberculous disease caused 15 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 4 from other forms of tuberculous disease, as against 23, 17, and 9 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer, and 12 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 6 from broncho-pneumonia, 3 from lobar pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

There was one death by suicide registered.

Among deaths of infants under one year old, one was due to diphtheria, one to venereal disease, 2 to convulsions, one to pneumonia (not otherwise defined), 4 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation, and 3 to congenital debility.

Twenty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 18 being infants under one year, of whom 8 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 114 deaths recorded, 35 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 3rd July in 105 large English towns (including London, in which the rate was 8·9) was equal to an average annual death-rate of 9·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·3 per 1000 persons living, the rate for Glasgow being 12·7, and for Edinburgh 9·9.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Showing the NUMBER OF CASES OF INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 3rd July, 1926**, and during each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

13adh lá de mhí Iúil, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 11·9 and 12·5; Dublin Registration Area, 13·1 and 12·7; Dublin County Borough, 12·1 and 12·5; Cork, 8·2 and 13·5; Limerick, 6·8 and 12·2; and Waterford, 7·6 and 13·3.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·5 per 1,000. One of the 4 deaths from all causes for Waterford was from diphtheria.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 208—118 boys and 90 girls—and the deaths to 119—65 males and 54 females.

The deaths registered, omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·1 per 1,000 of the population. During the twenty-seven weeks ending with Saturday last the death rate averaged 15·0 and was 4·7 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-seven weeks was 16·6, and during the corresponding periods of the preceding ten years 21·4.

Included in the 111 deaths appertaining to the Area are one from whooping-cough, 4 from diarrhoea and enteritis of children under 2 years, and 4 from influenza. In the three preceding weeks deaths from whooping-cough were 0, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 3, 2, and 4; and deaths from influenza were 4, 5, and 4.

Tuberculous disease caused 16 deaths (11 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 16, 9, and 15 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 8 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 4 from broncho-pneumonia, and 7 from pneumonia (not otherwise defined). Bronchitis caused one death.

Two accidental deaths were registered, one of which was caused by burns and one by a motor vehicle.

Among deaths of infants under one year old, 3 were due to convulsions, one to broncho-pneumonia, 4 to diarrhoea and enteritis, 2 to premature birth, and one to congenital debility.

Nineteen of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 13 being infants under one year, of whom 7 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 111 deaths recorded, 39 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 10th July in 105 large English towns (including London, in which the rate was 8·8) was equal to an average annual death-rate of 9·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·8 per 1000 persons living, the rate for Glasgow being 12·3, and for Edinburgh 12·8.

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, (a) 12·4 and 12·4; Dublin Registration Area, 12·2 and 12·5; Dublin County Borough, 12·9 and 12·2; Cork, 11·6 and 12·1; Limerick, 6·8 and 10·5; and Waterford, 22·8 and 14·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·3 per 1,000. Among the 17 deaths from all causes for Cork were one from diphtheria and one from gastro-enteritis of a child under 2 years: one of the 2 deaths for Kilkenny was from measles; and included in the 4 deaths for Tralee were one from measles and one from scarlet fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 209—107 boys and 102 girls—and the deaths to 127—70 males and 57 females.

The deaths registered, omitting the deaths (numbering 23) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·2 per 1,000 of the population. During the twenty-eight weeks ending with Saturday last the death rate averaged 14·9 and was 4·7 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-eight weeks was 16·5, and during the corresponding periods of the preceding ten years 21·3.

Included in the 104 deaths appertaining to the Area are 2 from measles, one from scarlet fever, and 9 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 2, 2 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 2, 4 and 4. There were no deaths from scarlet fever in the 3 preceding weeks.

One death from encephalitis lethargica was registered.

Tuberculous disease caused 9 deaths (5 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 3 from other forms of tuberculous disease), as against 9, 15, and 16 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 7 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and 7 from pneumonia (not otherwise defined). Bronchitis caused 2 deaths.

Four accidental deaths were registered, 2 of which were caused by drowning, and 2 by horse-drawn vehicles.

Among deaths of infants under one year old, one was due to congenital lues, 8 to diarrhoea and enteritis, 11 to premature birth, and one to congenital malformation.

Twenty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 13 were under one month old, and 29 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 104 deaths recorded, 47 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 17th July in 105 large English towns (including London, in which the rate was 9·0) was equal to an average annual death-rate of 9·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·4 per 1000 persons living, the rate for Glasgow being 11·5, and for Edinburgh 11·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

\* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 11·5 and 12·2; Dublin Registration Area, 11·5 and 12·6; Dublin County Borough, 11·5 and 12·1; Cork, 11·6 and 11·6; Limerick, 9·5 and 8·2; and Waterford, 13·3 and 13·3.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 17 deaths from all causes for Cork were one from diphtheria and one from gastro-enteritis of a child under 2 years: one of the 7 deaths for Waterford was from whooping-cough; and the single death recorded for Clonmel was from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 234—118 boys and 116 girls—and the deaths to 109—49 males and 60 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·5 per 1,000 of the population. During the twenty-nine weeks ending with Saturday last the death rate averaged 14·7 and was 4·7 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the twenty-nine weeks was 16·4, and during the corresponding periods of the preceding ten years 21·1.

Included in the 98 deaths appertaining to the Area are 2 from measles, 2 from scarlet fever, and 5 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from measles were 2, 0 and 2; deaths from scarlet fever were 0, 0 and 1; deaths from diarrhoea and enteritis of children under 2 years were 4, 4 and 9; and deaths from influenza were 4, 4 and 0.

One death from epidemic rose rash was registered.

Tuberculous disease caused 15 deaths (12 of which were from pulmonary tuberculosis, and 3 from other forms of tuberculous disease), as against 15, 16, and 9 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer, and 18 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 5 from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

One accidental death, caused by a motor vehicle, was registered.

Among deaths of infants under one year old, 4 were due to convulsions, one to bronchitis, 5 to diarrhoea and enteritis, 4 to premature birth, and one to congenital debility.

Twenty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 6 were under one month old, and 29 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 98 deaths recorded, 50 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 24th July in 105 large English towns (including London, in which the rate was 8·0) was equal to an average annual death-rate of 8·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·8 per 1000 persons living, the rate for Glasgow being 13·3, and for Edinburgh 9·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases

(a) See note (h) at foot of Table I.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·5 and 12·6; Dublin Registration Area, 14·6 and 12·9; Dublin County Borough, 15·2 and 12·9; Cork, 15·0 and 11·6; Limerick, 16·2 and 9·9; and Waterford, 3·8 and 11·9.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·8 per 1,000. Among the 22 deaths from all causes for Cork was one from whooping-cough; 2 of the 12 deaths for Limerick were from diarrhoea and enteritis of children under 2 years; one of the 6 deaths for Drogheda was from diphtheria; and included in the 9 deaths recorded for Kilkenny was one from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 227—119 boys and 108 girls—and the deaths to 134—76 males and 58 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·6 per 1,000 of the population. During the thirty weeks ending with Saturday last the death rate averaged 14·7 and was 4·5 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty weeks was 16·4, and during the corresponding periods of the preceding ten years 20·9.

Included in the 124 deaths appertaining to the Area are 4 from measles, one from scarlet fever, 2 from whooping-cough, one from diphtheria, 11 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from measles were 0, 2 and 2; deaths from scarlet fever were 0, one and 2; deaths from whooping-cough were one, 0 and 0; deaths from diarrhoea and enteritis of children under 2 years were 4, 9 and 5; and deaths from influenza were 4, 0 and one. There were no deaths from diphtheria in the three preceding weeks.

One death from encephalitis lethargica and 2 from epidemic rose rash were registered.

Tuberculous disease caused 7 deaths (3 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 16, 9, and 15 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer, and 12 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

Four accidental deaths, one of which was caused by drowning, and 2 by motor vehicles, were registered.

Among deaths of infants under one year old, one was due to measles, one to whooping cough, one to influenza, 2 to meningitis, one to convulsions, 2 to broncho-pneumonia, one to pneumonia, 11 to diarrhoea and enteritis, 5 to premature birth, 2 to congenital malformation, and 4 to congenital debility.

Forty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 35 being infants under one year, of whom 6 were under one month old, and 26 deaths were those of persons aged 65 years and upwards, of whom 20 were 70 years of age or over.

Of the 124 deaths recorded, 63 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 31st July in 105 large English towns (including London, in which the rate was 9·3) was equal to an average annual death-rate of 8·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10·4 per 1000 persons living, the rate for Glasgow being 10·0, and for Edinburgh 11·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

#### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 11·8 and 12·6; Dublin Registration Area, 11·5 and 12·5; Dublin County Borough, 12·9 and 13·1; Cork, 10·9 and 12·3; Limerick, 21·7 and 13·6; and Waterford, 9·5 and 12·4.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·5 per 1,000. Among the 16 deaths from all causes for Cork were 2 from measles and one from diarrhoea and enteritis of a child under 2 years.

#### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 274—146 boys and 128 girls—and the deaths to 111—59 males and 52 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·5 per 1,000 of the population. During the thirty-one weeks ending with Saturday last the death rate averaged 14·6 and was 4·4 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-one weeks was 16·3, and during the corresponding periods of the preceding ten years 20·7.

Included in the 98 deaths appertaining to the Area are 2 from measles, one from diphtheria, 12 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from measles were 2, 2 and 4; deaths from diphtheria were 0, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 9, 5 and 11; and deaths from influenza were 0, one and one.

Tuberculous disease caused 9 deaths (6 of which were from pulmonary tuberculosis, and 3 from other forms of tuberculous disease), as against 9, 15, and 7 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 10 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

Among deaths of infants under one year old, one was due to miliary tuberculosis, one to meningitis, one to convulsions, one to lobar pneumonia, 11 to diarrhoea and enteritis, 3 to premature birth, 2 to congenital malformation, and 2 to congenital debility.

Thirty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 7 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 15 were 70 years of age or over.

Of the 98 deaths recorded, 34 occurred in hospitals and other public institutions.

#### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 7th August in 105 large English towns (including London, in which the rate was 8·0) was equal to an average annual death-rate of 8·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·1 per 1000 persons living, the rate for Glasgow being 11·0, and for Edinburgh 12·6.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 7th August, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Pneumonia	29	28	20	3	4	1	18

\* Exclusive of 22 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1. and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chláirí Ghenearála,  
 Baile Átha Cliath,  
 17adh lá de mhí Lughnasa, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·7 and 13·1; Dublin Registration Area, 13·9 and 12·9; Dublin County Borough, 14·9 and 13·6; Cork, 20·4 and 14·5; Limerick, 23·0 and 17·6; and Waterford, 7·6 and 8·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 3·0 per 1,000. Among the 30 deaths from all causes for Cork were 6 from measles, one from whooping-cough and 2 from diarrhoea and enteritis of children under 2 years; included in the 17 deaths for Limerick were one from whooping-cough and 2 from diarrhoea and enteritis of children under 2 years; the 2 deaths recorded for Dundalk were also from diarrhoea and enteritis of children under 2 years; and one of the four deaths for Kilkenny was from measles.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 206—105 boys and 101 girls—and the deaths to 129—58 males and 71 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·9 per 1,000 of the population. During the thirty-two weeks ending with Saturday last the death rate averaged 14·6 and was 4·2 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-two weeks was 16·2, and during the corresponding periods of the preceding ten years 20·5.

Included in the 118 deaths appertaining to the Area are 6 from measles, and 17 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 2, 4 and 2, and deaths from diarrhoea and enteritis of children under 2 years were 5, 11 and 12.

Tuberculous disease caused 11 deaths (7 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 3 from other forms of tuberculous disease), as against 15, 7 and 9 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 15 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 5 from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused one death.

Six deaths from violence were registered, including one caused by a motor vehicle.

Among deaths of infants under one year old, 2 were due to measles, one to meningitis, one to convulsions, 2 to broncho-pneumonia, one to pneumonia, 14 to diarrhoea and enteritis, 6 to premature birth, 2 to congenital malformation, and 2 to congenital debility.

Forty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 36 being infants under one year, of whom 7 were under one month old, and 18 deaths were those of persons aged 65 years and upwards, of whom 13 were 70 years of age or over.

Of the 118 deaths recorded, 41 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 14th August in 105 large English towns (including London, in which the rate was 8·5) was equal to an average annual death-rate of 8·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10·0 per 1000 persons living, the rate for Glasgow being 10·4, and for Edinburgh 9·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 14th August, 1923, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs OR URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 678,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·1 and 14·0; Dublin Registration Area, 13·2 and 13·3; Dublin County Borough, 14·8 and 14·5; Cork, 23·8 and 17·5; Limerick, 23·0 and 21·0; and Waterford, 17·1 and 9·5.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 3·7 per 1,000. Among the 35 deaths from all causes for Cork were 6 from measles, one from whooping-cough and 3 from diarrhoea and enteritis of children under 2 years; included in the 17 deaths for Limerick were 3 from diarrhoea and enteritis of children under 2 years; and included in the 9 deaths recorded for Waterford were one from whooping-cough and one from diarrhoea and enteritis of a child under 2 years.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 187—101 boys and 86 girls—and the deaths to 123—53 males and 70 females.

The deaths registered, omitting 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·2 per 1,000 of the population. During the thirty-three weeks ending with Saturday last the death rate averaged 14·6 and was 4·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-three weeks was 16·2, and during the corresponding periods of the preceding ten years 20·3.

Included in the 112 deaths appertaining to the Area are 2 from measles, 2 from diphtheria, 27 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from measles were 4, 2 and 6; deaths from diphtheria were one, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 11, 12 and 17; and deaths from influenza were one, one and 0.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 7, 9 and 11 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 11 by diseases of the heart.

There were 2 deaths from pneumonia, comprising one from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

One accidental death, caused by a motor vehicle, was registered.

Among deaths of infants under one year old, one was due to measles, one to venereal disease, 2 to convulsions, one to bronchitis, 25 to diarrhoea and enteritis, one to premature birth, 3 to congenital malformation, and 3 to congenital debility.

Forty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 39 being infants under one year, of whom 6 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 112 deaths recorded, 41 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 21st August in 105 large English towns (including London, in which the rate was 8·1) was equal to an average annual death-rate of 8·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10·0 per 1000 persons living, the rate for Glasgow being 10·4, and for Edinburgh 9·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,763, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·0 and 14·2; Dublin Registration Area, 15·1 and 14·0; Dublin County Borough, 15·2 and 14·4; Cork (a), 13·3 and 16·8; Limerick, 10·5 and 19·0; and Waterford, 17·6 and 13·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·5 per 1,000. The 20 deaths from all causes for Cork included 3 from measles and one from diarrhoea and enteritis of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 245—119 boys and 126 girls—and the deaths to 137—72 males and 65 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·1 per 1,000 of the population. During the thirty-four weeks ending with Saturday last the death rate averaged 15·4 and was 3·5 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-four weeks was 17·1, and during the corresponding periods of the preceding ten years 20·5.

Included in the 121 deaths appertaining to the Area are one from measles, one from whooping-cough, one from diphtheria, and 22 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 2, 6 and 2; deaths from diphtheria were one, 0 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 12, 17 and 27. There were no deaths from whooping-cough in the three preceding weeks.

Tuberculous disease caused 15 deaths (8 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 4 from other forms of tuberculous disease), as against 9, 11 and 13 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 16 by diseases of the heart.

One death from lobar pneumonia, and 6 from bronchitis were registered.

There were 2 accidental deaths, one of which was caused by carbon monoxide poisoning.

Among deaths of infants under one year old, one was due to measles, one to whooping-cough, one to diphtheria, one to convulsions, 21 to diarrhoea and enteritis, one to premature birth, one to congenital malformation, and 4 to congenital debility.

Thirty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 34 being infants under one year, of whom 6 were under one month old, and 30 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 121 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 28th August in 105 large English towns (including London, in which the rate was 8·9) was equal to an average annual death-rate of 8·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·2 per 1000 persons living, the rate for Glasgow being 11·3, and for Edinburgh 11·4.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases. (a) See note (a) at foot of Table II.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 28th August, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROWERS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY County Boroughs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Pneumonia	18	15	15	3	7	.	11

\* Exclusive of 23 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·6 and 14·8; Dublin Registration Area, 12·4 and 14·0; Dublin County Borough, 13·8 and 15·2; Cork, 23·9 and 20·1; Limerick, 30·2 and 21·3; and Waterford, 5·9 and 12·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·8 per 1,000. The 36 deaths from all causes for Cork included 5 from measles, one from whooping-cough, and 4 from diarrhoea and enteritis of children under 2 years; among the 23 deaths for Limerick were 3 from diphtheria and one from diarrhoea and enteritis of a child under 2 years; and one of the 2 deaths for Kilkenny was from measles.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 217—122 boys and 95 girls—and the deaths to 113—66 males and 47 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·4 per 1,000 of the population. During the thirty-five weeks ending with Saturday last the death rate averaged 15·3 and was 3·5 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-five weeks was 17·1, and during the corresponding periods of the preceding ten years 20·4.

Included in the 100 deaths appertaining to the Area are 19 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 17, 27 and 22.

Tuberculous disease caused 14 deaths (7 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 4 from other forms of tuberculous disease) as against 11, 13 and 15 from all forms of tuberculosis in the three weeks preceding.

Sixteen deaths were caused by cancer, and 8 by diseases of the heart.

There were 4 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 2 deaths.

Two deaths from violence were registered.

Among deaths of infants under one year old, one was due to tuberculous meningitis, 5 were due to convulsions, 18 to diarrhoea and enteritis, 2 to premature birth, one to congenital malformation, and 4 to congenital debility.

Thirty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 32 being infants under one year, of whom 6 were under one month old, and 20 deaths were those of persons aged 65 years and upwards, of whom 13 were 70 years of age or over.

Of the 100 deaths recorded, 38 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 4th September in 105 large English towns (including London, in which the rate was 9·0) was equal to an average annual death-rate of 9·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10·4 per 1000 persons living, the rate for Glasgow being 11·1, and for Edinburgh 10·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 4th September, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 14 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 36. VOL. LXIII.] WEEK ENDED SATURDAY, 11TH SEPTEMBER, 1926. [PRICE 1½d. NET.

*Oifig um Chláruí Ghenearála,  
Baile Átha Cliath,  
14adh lá de mhí Meadhon Fогhmhair, 1926.*

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population :—

Twelve Town Districts, 14·3 and 14·6; Dublin Registration Area, 13·2 and 13·7; Dublin County Borough, 13·7 and 14·6; Cork, 21·9 and 20·6; Limerick, 15·8 and 19·7; and Waterford, 13·7 and 13·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 3·1 per 1,000. The 33 deaths from all causes for Cork included 4 from measles, 4 from whooping-cough, and 5 from diarrhoea and enteritis of children under 2 years; 2 of the 12 deaths for Limerick and 2 of the 7 deaths for Waterford were from diarrhoea and enteritis of children under 2 years; and the only death for Tralee was one from scarlet fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 226—118 boys and 108 girls—and the deaths to 120—59 males and 61 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·2 per 1,000 of the population. During the thirty-six weeks ending with Saturday last the death rate averaged 15·3 and was 3·4 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-six weeks was 17·0, and during the corresponding periods of the preceding ten years 20·3.

Included in the 106 deaths appertaining to the Area are 2 from scarlet fever, one from whooping-cough and 17 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 27, 22 and 19. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 7 deaths (4 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 13, 15 and 14 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 15 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 3 from broncho-pneumonia, and one from lobar pneumonia. Bronchitis caused 3 deaths.

Among deaths of infants under one year old, one was due to erysipelas, one to bronchitis, 15 to diarrhoea and enteritis, 5 to premature birth, and 5 to congenital debility.

Thirty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 27 being infants under one year, of whom 7 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 106 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 11th September in 105 large English towns (including London, in which the rate was 8·7) was equal to an average annual death-rate of 9·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10·7 per 1000 persons living, the rate for Glasgow being 12·3, and for Edinburgh 9·0.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 11th September, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 15 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 37. VOL. LXIII.] WEEK ENDED SATURDAY, 18TH SEPTEMBER, 1926. [PRICE 1½d. NET.

*Oifig um Chláirú Ghinearálta,  
Baile Átha Cliath,  
21adh lá de mhí Meadhon Fómhair, 1926.*

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·5 and 14·9; Dublin Registration Area, 16·8 and 14·4; Dublin County Borough, 16·3 and 14·7; Cork, 19·3 and 19·6; Limerick, 11·8 and 17·1; and Waterford, 25·4 and 15·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 3·3 per 1,000. The 29 deaths from all causes for Cork included 4 from measles, one from whooping-cough, and one from diarrhoea and enteritis of a child under 2 years; among the 9 deaths for Limerick were one from scarlet fever and one from whooping-cough; one of the four deaths for Dundalk was from scarlet fever, and one of the 3 deaths for Kilkenny was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 186—96 boys and 90 girls—and the deaths to 148—70 males and 78 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·8 per 1,000 of the population. During the thirty-seven weeks ending with Saturday last the death rate averaged 15·3 and was 3·3 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-seven weeks was 17·0, and during the corresponding periods of the preceding ten years 20·2.

Included in the 135 deaths appertaining to the Area are one from enteric fever, one from scarlet fever, 2 from whooping-cough, one from diphtheria, 23 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from scarlet fever were 0, 0 and 2, deaths from whooping-cough were one, 0 and one; deaths from diphtheria were one, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 22, 19 and 17. There were no deaths from enteric fever or influenza in the three preceding weeks.

One death from encephalitis lethargica and one from epidemic rose rash were registered.

Tuberculous disease caused 6 deaths (4 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease) as against 15, 14 and 7 from all forms of tuberculosis in the three weeks preceding.

Eighteen deaths were caused by cancer, and 9 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 3 from broncho-pneumonia, 2 from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

One accidental death was registered.

Among deaths of infants under one year old, one was due to whooping-cough, 4 were due to convulsions, one to broncho-pneumonia, one to lobar pneumonia, one to pneumonia (not otherwise defined), 20 to diarrhoea and enteritis, 4 to premature birth, and 7 to congenital debility.

Fifty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 43 being infants under one year, of whom 7 were under one month old, and 26 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 135 deaths recorded, 52 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 18th September in 105 large English towns (including London, in which the rate was 9·2) was equal to an average annual death-rate of 9·3 per 1,000 of the estimated civil population.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 18th September, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 12 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,  
28adh lá de mhí Meadhon Foghmhair, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·8 and 14·6; Dublin Registration Area, 11·6 and 13·5; Dublin County Borough, 13·0 and 14·2; Cork, 18·6 and 20·9; Limerick, 18·4 and 19·1; and Waterford, 11·7 and 14·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·0 per 1,000. The 28 deaths from all causes for Cork included 5 from measles, and 4 from diarrhoea and enteritis of children under 2 years.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 228—119 boys and 109 girls—and the deaths to 111—61 males and 50 females.

The deaths registered, omitting the deaths (numbering 18) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·6 per 1,000 of the population. During the thirty-eight weeks ending with Saturday last the death rate averaged 15·2 and was 3·3 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-eight weeks was 16·9, and during the corresponding periods of the preceding ten years 20·1.

Included in the 93 deaths appertaining to the Area are one from enteric fever, one from scarlet fever, 2 from diphtheria, and 12 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from enteric fever were 0, 0 and one; deaths from scarlet fever were 0, 2 and one; deaths from diphtheria were 0, 0 and one; and deaths from diarrhoea and enteritis of children under 2 years were 19, 17 and 23.

Tuberculous disease caused 15 deaths (12 of which were from pulmonary tuberculosis, one from tuberculosis of joints, and 2 from general tuberculosis) as against 14, 7 and 6 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 10 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 4 deaths.

One accidental death, caused by a motor vehicle, was registered.

Among deaths of infants under one year old, one was due to syphilis, and one to meningitis, 3 were due to convulsions, 11 to diarrhoea and enteritis, 3 to premature birth, and 6 to congenital debility.

Thirty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 25 being infants under one year, of whom 8 were under one month old, and 20 deaths were those of persons aged 65 years and upwards, of whom 11 were 70 years of age or over.

Of the 93 deaths recorded, 47 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 25th September in 105 large English towns (including London, in which the rate was 9·3) was equal to an average annual death-rate of 9·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·0 per 1000 persons living, the rate for Glasgow being 11·3, and for Edinburgh 12·3.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·2 and 14·5; Dublin Registration Area, 13·2 and 13·7; Dublin County Borough, 14·3 and 14·3; Cork, 23·3 and 20·8; Limerick, 11·8 and 14·5; and Waterford, 13·7 and 16·1.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·5 per 1,000. The 35 deaths from all causes for Cork included 2 from measles, one from scarlet fever, one from diphtheria and 5 from diarrhoea and enteritis of children under 2 years; and one of the 8 deaths for Drogheda was from whooping-cough.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 333—170 boys and 163 girls—and the deaths to 126—67 males and 59 females.

The deaths registered, omitting the deaths (numbering 20) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·2 per 1,000 of the population. During the thirty-nine weeks ending with Saturday last the death rate averaged 15·2 and was 3·2 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the thirty-nine weeks was 16·9, and during the corresponding periods of the preceding ten years 20·0.

Included in the 106 deaths appertaining to the Area are 3 from measles, one from scarlet fever, one from whooping-cough, one from diphtheria, and 13 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from scarlet fever were 2, one and one; deaths from whooping-cough were one, 2 and 0; deaths from diphtheria were 0, one and 2; and deaths from diarrhoea and enteritis of children under 2 years were 17, 23 and 12. There were no deaths from measles in the three preceding weeks.

One death from cerebro-spinal meningitis was registered.

Tuberculous disease caused 12 deaths (7 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis and one from tuberculosis of the spine) as against 7, 6 and 15 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 9 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia and one from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Among deaths of infants under one year old, one was due to measles, and one to syphilis, 3 were due to convulsions, one to bronchitis, one to broncho-pneumonia, one to pneumonia, 11 to diarrhoea and enteritis, 3 to premature birth, and 5 to congenital debility.

Thirty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 28 being infants under one year, of whom 7 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 106 deaths recorded, 49 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 2nd October in 105 large English towns (including London, in which the rate was 9·6) was equal to an average annual death-rate of 10·0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·7 per 1000 persons living, the rate for Glasgow being 13·0, and for Edinburgh 9·7.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·7 and 14·6; Dublin Registration Area, 13·6 and 13·8; Dublin County Borough, 14·8 and 14·6; Cork, 19·9 and 20·3; Limerick, 25·0 and 16·8; and Waterford, 15·7 and 16·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·7 per 1,000. The 30 deaths from all causes for Cork included 7 from measles, one from diphtheria and 5 from diarrhoea and enteritis of children under 2 years; and among the 19 deaths for Limerick were one from scarlet fever and one from diarrhoea and enteritis of a child under 2 years.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 237—128 boys and 109 girls—and the deaths to 120—57 males and 63 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·6 per 1,000 of the population. During the forty weeks ending with Saturday last the death rate averaged 15·1 and was 3·2 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty weeks was 16·9, and during the corresponding periods of the preceding ten years 19·9.

Included in the 109 deaths appertaining to the Area are one from whooping-cough, 3 from diphtheria, 14 from diarrhoea and enteritis of children under 2 years and one from influenza. In the three preceding weeks deaths from whooping-cough were 2, 0 and one; deaths from diphtheria were one, 2 and one; deaths from diarrhoea and enteritis of children under 2 years were 23, 12 and 13; and deaths from influenza were one, 0 and 0.

Tuberculous disease caused 10 deaths (8 of which were from pulmonary tuberculosis, one from intestinal tuberculosis and one from general tuberculosis) as against 6, 15 and 12 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 14 by diseases of the heart.

There were 2 deaths from broncho-pneumonia, and 8 from bronchitis.

Three accidental deaths were registered.

Among deaths of infants under one year old, one was due to whooping-cough, one to specific disease, one to meningitis, one to broncho-pneumonia, 13 to diarrhoea and enteritis, one to premature birth, one to congenital malformation and 7 to congenital debility.

Thirty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 29 being infants under one year, of whom 6 were under one month old, and 27 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 109 deaths recorded, 54 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 9th October in 105 large English towns (including London, in which the rate was 10·3) was equal to an average annual death-rate of 10·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·6 per 1000 persons living, the rate for Glasgow being 11·8, and for Edinburgh 12·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended **Saturday, 9th October, 1926**, the number of Deaths of Residents of the several Districts comprising the **DUBLIN REGISTRATION AREA**, and the **COUNTY BOROUGH OF CORK**, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the *Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.*

\* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

### DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

*By Authority of the Registrar-General.*

To be purchased through any Bookseller or directly from  
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 41. VOL. LXIII.] WEEK ENDED SATURDAY, 16TH OCTOBER, 1926. [PRICE 1½d. NET.

*Oifig um Chláirí Ghenearála,  
Baile Átha Cliath,  
19adh lá de mhí Deireadh Fómhair, 1926.*

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·5 and 14·1; Dublin Registration Area, 14·6 and 13·3; Dublin County Borough, 14·8 and 14·2; Cork, 21·9 and 20·9; Limerick, 5·3 and 15·1; and Waterford, 7·8 and 12·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·7 per 1,000. The 33 deaths from all causes for Cork included 8 from measles, one from whooping-cough, one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years; 3 of the 4 deaths for Limerick were from diarrhoea and enteritis of children under 2 years; and among the 6 deaths for Dundalk were one from scarlet fever and one from cerebro-spinal meningitis.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 193—100 boys and 93 girls—and the deaths to 128—54 males and 74 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·6 per 1,000 of the population. During the forty-one weeks ending with Saturday last the death rate averaged 15·1 and was 3·2 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-one weeks was 16·8, and during the corresponding periods of the preceding ten years 19·8.

Included in the 117 deaths appertaining to the Area are 2 from whooping-cough, 3 from diphtheria, 12 from diarrhoea and enteritis of children under 2 years and one from influenza. In the three preceding weeks deaths from whooping-cough were 0, one and one; deaths from diphtheria were 2, one and 3; deaths from diarrhoea and enteritis of children under 2 years were 12, 13 and 14; and deaths from influenza were 0, 0 and one.

Tuberculous disease caused 15 deaths (13 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from general tuberculosis) as against 15, 12 and 10 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 19 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

Three accidental deaths were registered, one of which was caused by drowning and one by carbon monoxide poisoning.

Among deaths of infants under one year old, 2 were due to meningitis, 3 to convulsions, one to bronchitis, one to broncho-pneumonia, 11 to diarrhoea and enteritis, 4 to premature birth, one to congenital malformation and 5 to congenital debility.

Forty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 30 being infants under one year, of whom 11 were under one month old, and 22 deaths were those of persons aged 65 years and upwards, of whom 17 were 70 years of age or over.

Of the 117 deaths recorded, 48 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 16th October in 105 large English towns (including London, in which the rate was 10·1) was equal to an average annual death-rate of 10·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·4 per 1000 persons living, the rate for Glasgow being 11·3, and for Edinburgh 12·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 16th October, 1923, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, the annual rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

## TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·0 and 14·9; Dublin Registration Area, 14·1 and 13·9; Dublin County Borough, 14·7 and 14·7; Cork, 20·6 and 21·4; Limerick, 30·2 and 18·1; and Waterford, 13·7 and 12·7.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 3·0 per 1,000. The 31 deaths from all causes for Cork included one from enteric fever, 8 from measles, 2 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years; one of the 23 deaths for Limerick was from enteric fever and 4 were from diarrhoea and enteritis of children under 2 years; and of the 2 deaths for Drogheda one was from diphtheria.

## DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 180—95 boys and 85 girls—and the deaths to 124—56 males and 68 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·1 per 1,000 of the population. During the forty-two weeks ending with Saturday last the death rate averaged 15·1 and was 3·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-two weeks was 16·8, and during the corresponding periods of the preceding ten years 19·8.

Included in the 113 deaths appertaining to the Area are 2 from enteric fever, one from measles, one from scarlet fever, 3 from whooping-cough, 3 from diphtheria, and 6 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 3, 0 and 0; deaths from scarlet fever were one, 0 and 0; deaths from whooping-cough were one, one, and 2; deaths from diphtheria were one, 3, and 3; and deaths from diarrhoea and enteritis of children under 2 years were 13, 14 and 12. There were no deaths from enteric fever in the three preceding weeks.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, one from abdominal tuberculosis and one from general tuberculosis) as against 12, 10 and 15 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 14 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia and one from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Among deaths of infants under one year old, one was due to whooping-cough, one to diphtheria, one to tuberculosis, 4 to convulsions, one to bronchitis, 3 to broncho-pneumonia, 6 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation and 5 to congenital debility.

Thirty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 11 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 113 deaths recorded, 47 occurred in hospitals and other public institutions.

## ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 23rd October in 105 large English towns (including London, in which the rate was 11·5) was equal to an average annual death-rate of 11·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·4 per 1000 persons living, the rate for Glasgow being 12·2, and for Edinburgh 11·1.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 23rd October, 1923, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 22 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 43. VOL. LXIII.]

WEEK ENDED SATURDAY, 30TH OCTOBER, 1926. [PRICE 1½d. NET.]

*Oifig um Chláirí Ghenearála,  
Baile Átha Cliath,  
2adh lá de mhí Samhna, 1926.*

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18·5 and 15·9, Dublin Registration Area, 18·0 and 15·1; Dublin County Borough, 19·1 and 15·9; Cork, 27·2 and 22·4; Limerick, 14·5 and 18·8; and Waterford, 19·6 and 14·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·1 per 1,000. The 41 deaths from all causes for Cork included 3 from measles, 3 from diphtheria and 3 from diarrhoea and enteritis of children under 2 years; 2 of the 11 deaths for Limerick and 2 of the 10 deaths for Waterford were from diarrhoea and enteritis of children under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 208—103 boys and 105 girls—and the deaths to 169—77 males and 92 females.

The deaths registered, omitting the deaths (numbering 24) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 18·0 per 1,000 of the population. During the forty-three weeks ending with Saturday last the death rate averaged 15·2 and was 3·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-three weeks was 16·9, and during the corresponding periods of the preceding ten years 19·8.

Included in the 145 deaths appertaining to the Area are one from whooping-cough, 2 from diphtheria, and 9 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were one, 2 and 3; deaths from diphtheria were 3, 3, and 3; and deaths from diarrhoea and enteritis of children under 2 years were 14, 12 and 6.

One death from encephalitis lethargica was registered.

Tuberculous disease caused 18 deaths (12 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis and 3 from abdominal tuberculosis) as against 10, 15 and 11 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 22 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 8 from broncho-pneumonia, 2 from lobar pneumonia and one from pneumonia (not otherwise defined). Bronchitis caused 16 deaths.

Two accidental deaths, one of which was caused by a motor vehicle, were registered.

Among deaths of infants under one year old, one was due to tabes mesenterica, one to syphilis, one to meningitis, one to convulsions, one to bronchitis, one to broncho-pneumonia, 8 to diarrhoea and enteritis, 4 to premature birth, 4 to congenital malformation and 3 to congenital debility.

Thirty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 27 being infants under one year, of whom 15 were under one month old, and 40 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 145 deaths recorded, 57 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 30th October in 105 large English towns (including London, in which the rate was 12·7) was equal to an average annual death-rate of 12·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·8 per 1000 persons living, the rate for Glasgow being 13·6, and for Edinburgh 13·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 30th October, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

### DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

*By Authority of the Registrar-General.*

To be purchased through any Bookseller or directly from  
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 44. VOL. LXIII.] WEEK ENDED SATURDAY, 6TH NOVEMBER, 1926. [PRICE 1½d. NET.

*Oifig um Chláirí Ghinearálta,  
Baile Átha Cliath,  
9adh lá de mhí na Samhna, 1926.*

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18·6 and 16·9, Dublin Registration Area, 18·4 and 16·3; Dublin County Borough, 19·6 and 17·1; Cork, 20·6 and 22·6; Limerick, 30·2 and 20·1; and Waterford, 23·5 and 16·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. The 31 deaths from all causes for Cork included 5 from measles, and one from diphtheria; and one of the 23 deaths for Limerick was from enteric fever.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 217—110 boys and 107 girls—and the deaths to 164—81 males and 83 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 18·4 per 1,000 of the population. During the forty-four weeks ending with Saturday last the death rate averaged 15·2 and was 3·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-four weeks was 17·0, and during the corresponding periods of the preceding ten years 19·8.

Included in the 148 deaths appertaining to the Area are one from measles, one from whooping-cough, 2 from diphtheria, 4 from diarrhoea and enteritis of children under 2 years and one from influenza. In the three preceding weeks deaths from measles were 0, one and 0; deaths from whooping-cough were 2, 3 and one; deaths from diphtheria were 3, 3, and 2; deaths from diarrhoea and enteritis of children under 2 years were 12, 6, and 9; and deaths from influenza were one, 0 and 0.

Tuberculous disease caused 14 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis, one from intestinal tuberculosis and 3 from other forms of tuberculosis) as against 15, 11 and 18 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 22 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 22 deaths.

Two accidental deaths were registered, one (that of a child aged 1 year) having been caused by burns, and one by a motor vehicle.

Among deaths of infants under one year old, one was due to whooping-cough, 3 to convulsions, 2 to bronchitis, 2 to broncho-pneumonia, one to congestion of the lungs, 4 to diarrhoea and enteritis, 6 to premature birth, and 4 to congenital debility.

Thirty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 28 being infants under one year, of whom 12 were under one month old, and 46 deaths were those of persons aged 65 years and upwards, of whom 35 were 70 years of age or over.

Of the 148 deaths recorded, 62 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 6th November in 105 large English towns (including London, in which the rate was 13·7) was equal to an average annual death-rate of 12·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·8 per 1000 persons living, the rate for Glasgow being 16·6, and for Edinburgh 16·6.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 6th November, 1923, the number of Deaths of Residents of the several Districts comprising the Dublin Registration Area, and the County Borough of Cork,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

*Oifig um Chláru Gheneardáta,  
Baile Átha Cliath,  
16adh lá de mhí na Samhna, 1926.*

TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·4 and 17·4; Dublin Registration Area, 17·7 and 17·1; Dublin County Borough, 18·5 and 18·0; Cork, 18·6 and 21·8; Limerick, 9·2 and 21·0; and Waterford, 13·7 and 17·6

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·4 per 1,000. The 28 deaths from all causes for Cork included 2 from measles and 4 from diarrhoea and enteritis of children under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 179—94 boys and 85 girls—and the deaths to 157—84 males and 73 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17·7 per 1,000 of the population. During the forty-five weeks ending with Saturday last the death rate averaged 15·3 and was 3·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-five weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 142 deaths appertaining to the Area are 2 from scarlet fever, one from diphtheria, 7 from diarrhoea and enteritis of children under 2 years and one from influenza. In the three preceding weeks deaths from scarlet fever were one, 0 and 0; deaths from diphtheria were 3, 2 and 2; deaths from diarrhoea and enteritis of children under 2 years were 6, 9 and 4; and deaths from influenza were 0, 0 and one.

Tuberculous disease caused 14 deaths (all of which were from pulmonary\* tuberculosis), as against 11, 18 and 14 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer, and 14 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

Four deaths by violence were registered, one having been caused by burns, and one by drowning.

Among deaths of infants under one year old, one was due to convulsions, 3 to broncho-pneumonia, one to lobar pneumonia, 7 to diarrhoea and enteritis, 6 to premature birth, 4 to congenital malformation and 3 to congenital debility.

Thirty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 28 being infants under one year, of whom 12 were under one month old, and 42 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 142 deaths recorded, 61 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 13th November in 105 large English towns (including London, in which the rate was 12·6) was equal to an average annual death-rate of 12·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·2 per 1000 persons living, the rate for Glasgow being 15·3, and for Edinburgh 18·8.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the week ended **Saturday, 13th November, 1923**, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 16 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·5 and 17·0; Dublin Registration Area, 12·7 and 16·7; Dublin County Borough, 13·3 and 17·6; Cork, 23·9 and 22·6; Limerick, 21·0 and 18·7; and Waterford, 7·8 and 16·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. The 36 deaths from all causes for Cork included 2 from measles, one from diphtheria and one from diarrhoea and enteritis of a child under 2 years; and one of the 16 deaths for Limerick was from diphtheria.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 248—126 boys and 122 girls—and the deaths to 112—49 males and 63 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·7 per 1,000 of the population. During the forty-six weeks ending with Saturday last the death rate averaged 15·2 and was 3·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-six weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 102 deaths appertaining to the Area are one from scarlet fever, one from whooping-cough, 2 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the three preceding weeks deaths from scarlet fever were 0, 0 and 2; deaths from whooping-cough were one, one and 0; deaths from diphtheria were 2, 2 and one; deaths from diarrhoea and enteritis of children under 2 years were 9, 4 and 7; and deaths from influenza were 0, one and one.

Tuberculous disease caused 8 deaths (5 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculosis), as against 18, 14 and 14 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 16 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

Among deaths of infants under one year old, one was due to whooping-cough, one to influenza, one to struma, one to convulsions, 2 to diarrhoea and enteritis, 3 to premature birth, 2 to congenital malformation and 5 to congenital debility.

Twenty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 19 being infants under one year, of whom 6 were under one month old, and 40 deaths were those of persons aged 65 years and upwards, of whom 28 were 70 years of age or over.

Of the 102 deaths recorded, 51 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 20th November in 105 large English towns (including London, in which the rate was 11·9) was equal to an average annual death-rate of 12·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·8 per 1000 persons living, the rate for Glasgow being 15·3, and for Edinburgh 15·8.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 20th November, 1926, the number of Deaths of Residents of the several Districts comprising the Dublin Registration Area, and the County Borough of Cork, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 24 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 47. VOL. LXIII.] WEEK ENDED SATURDAY, 27TH NOVEMBER, 1926. [PRICE 1½d. NET

*Oifig um Chláirú Ghenearála,  
Baile Átha Cliath,  
30adh lá de mhí na Samhna, 1926.*

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·1 and 16·2; Dublin Registration Area, 14·4 and 15·8; Dublin County Borough, 13·0 and 16·1; Cork, 13·3 and 19·1; Limerick, 17·1 and 19·4; and Waterford, 27·4 and 18·1.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. The 20 deaths from all causes for Cork included one from measles and one from scarlet fever; among the 14 deaths for Waterford were one from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years; while one of the 8 deaths for Galway and one of the 4 deaths for Drogheda were from scarlet fever.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 230—121 boys and 109 girls—and the deaths to 133—71 males and 62 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·4 per 1,000 of the population. During the forty-seven weeks ending with Saturday last the death rate averaged 15·2 and was 3·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-seven weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 116 deaths appertaining to the Area are one from measles, one from diphtheria, 4 from diarrhoea and enteritis of children under 2 years, and 4 from influenza. In the three preceding weeks deaths from measles were one, 0 and 0; deaths from diphtheria were 2, one and 2; deaths from diarrhoea and enteritis of children under 2 years were 4, 7 and 3; and deaths from influenza were one, one and one.

Tuberculous disease caused 8 deaths (6 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculous arthritis), as against 14, 14 and 8 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 13 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 9 deaths.

Three accidental deaths were registered.

Among deaths of infants under one year old, one was due to diphtheria, one to tuberculosis, 4 to convulsions, one to bronchitis, one to pneumonia, 4 to diarrhoea and enteritis, 2 to premature birth, and 4 to congenital debility.

Twenty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 5 were under one month old, and 39 deaths were those of persons aged 65 years and upwards, of whom 32 were 70 years of age or over.

Of the 116 deaths recorded, 48 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 27th November in 105 large English towns (including London, in which the rate was 10·8) was equal to an average annual death-rate of 11·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·2 per 1000 persons living, the rate for Glasgow being 15·5, and for Edinburgh 14·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the week ended Saturday, 27th November, 1923, the number of DEATHS of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

7adh lá de mhí na Nodlag, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·7 and 15·7; Dublin Registration Area, 16·0 and 15·2; Dublin County Borough, 15·3 and 15·0; Cork, 19·3 and 18·8; Limerick, 18·4 and 16·4; and Waterford, 17·6 and 16·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. The 29 deaths from all causes for Cork included one from measles and one from whooping-cough; and one of the 5 deaths for Tralee was from scarlet fever.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 266—122 boys and 144 girls—and the deaths to 142—68 males and 74 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·0 per 1,000 of the population. During the forty-eight weeks ending with Saturday last the death rate averaged 15·2 and was 3·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-eight weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 129 deaths appertaining to the Area are one from measles, 2 from whooping-cough, 3 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the three preceding weeks deaths from measles were 0, 0 and one; deaths from whooping-cough were 0, one and 0; deaths from diphtheria were one, 2 and one; deaths from diarrhoea and enteritis of children under 2 years were 7, 3 and 4; and deaths from influenza were one, one and 4.

Tuberculous disease caused 11 deaths (10 of which were from pulmonary tuberculosis, and one from tuberculosis of the spine), as against 14, 8 and 8 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer, and 14 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 14 deaths.

Three accidental deaths were registered, one of which was caused by drowning.

Among deaths of infants under one year old, one was due to measles, 4 to convulsions, 4 to bronchitis, one to pneumonia, 3 to diarrhoea and enteritis, 4 to premature birth, 2 to congenital malformation, and 2 to congenital debility.

Twenty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 6 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 129 deaths recorded, 56 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 4th December in 105 large English towns (including London, in which the rate was 11·8) was equal to an average annual death-rate of 12·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·6 per 1000 persons living, the rate for Glasgow being 16·0, and for Edinburgh 13·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the week ended Saturday, 4th December, 1926, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,\* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

\* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·8 and 15·8; Dublin Registration Area, 16·2 and 14·8; Dublin County Borough, 16·5 and 14·5; Cork, 17·3 and 18·5; Limerick, 27·6 and 21·0; and Waterford, 23·5 and 19·1.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. The 26 deaths from all causes for Cork included one from measles, one from diphtheria and one from diarrhoea and enteritis of a child under 2 years.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 198—99 boys and 99 girls—and the deaths to 142—73 males and 69 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·2 per 1,000 of the population. During the forty-nine weeks ending with Saturday last the death rate averaged 15·3 and was 3·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the forty-nine weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 130 deaths appertaining to the Area are one from measles, 3 from whooping-cough, 2 from diphtheria, 2 from diarrhoea and enteritis of children under 2 years, and 3 from influenza. In the three preceding weeks deaths from measles were 0, one and one; deaths from whooping-cough were one 0, and 2; deaths from diphtheria were 2, one and 3; deaths from diarrhoea and enteritis of children under 2 years were 3, 4 and 3; and deaths from influenza were one, 4 and 2.

One death from encephalitis lethargica was registered.

Tuberculous disease caused 10 deaths (9 of which were from pulmonary tuberculosis, and one from tuberculous peritonitis), as against 8, 8 and 11 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 10 by diseases of the heart.

There were 6 deaths from pneumonia, comprising one from broncho-pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

Two accidental deaths, one of which was caused by scalds, were registered, and there was also one case of infanticide.

Among deaths of infants under one year old, one was due to whooping-cough, one to diphtheria, 3 to convulsions, 2 to bronchitis, one to pneumonia, 2 to diarrhoea and enteritis, 5 to premature birth, and 3 to congenital debility.

Thirty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 8 were under one month old, and 44 deaths were those of persons aged 65 years and upwards, of whom 33 were 70 years of age or over.

Of the 130 deaths recorded, 59 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 11th December in 105 large English towns (including London, in which the rate was 13·3) was equal to an average annual death-rate of 13·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·9 per 1000 persons living, the rate for Glasgow being 16·8, and for Edinburgh 14·7.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, *the Deaths in Public Institutions being assigned to the Districts to which the Deceased were admitted.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population :—

Twelve Town Districts, 15·1 and 15·9; Dublin Registration Area, 15·7 and 15·6; Dublin County Borough, 15·8 and 15·2; Cork, 16·6 and 16·6; Limerick, 15·8 and 19·7; and Waterford, 13·7 and 20·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·8 per 1,000..

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 221—111 boys and 110 girls—and the deaths to 136—68 males and 68 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population. During the fifty weeks ending with Saturday last the death rate averaged 15·3 and was 3·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths, registered during the fifty weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 126 deaths appertaining to the Area are one from measles, 5 from whooping-cough, 3 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the three preceding weeks deaths from measles were one, one and one; deaths from whooping-cough were 0, 2 and 3; deaths from diarrhoea and enteritis of children under 2 years were 4, 3 and 2; and deaths from influenza were 4, 2 and 3.

Tuberculous disease caused 13 deaths (12 of which were from pulmonary tuberculosis, and one from tuberculous hip joint disease), as against 8, 11 and 10 from all forms of tuberculosis in the three weeks preceding.

Sixteen deaths were caused by cancer, and 14 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 8 from broncho-pneumonia, 2 from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

Three accidental deaths, one of which (that of a child aged 3 years) was caused by burns, were registered. There was also one case of suicide.

Among deaths of infants under one year old, one was due to measles, 3 were due to whooping-cough, one to meningitis, 3 to bronchitis, 3 to broncho-pneumonia, 2 to diarrhoea and enteritis, 7 to premature birth, and one to congenital debility.

Twenty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 22 being infants under one year, of whom 7 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 26 were 70 years of age or over.

Of the 126 deaths recorded, 50 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 18th December in 105 large English towns (including London, in which the rate was 13·2) was equal to an average annual death-rate of 12·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·6 per 1000 persons living, the rate for Glasgow being 14·9, and for Edinburgh 14·4.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 15th December, 1926, the number of Deaths of residents of the several Districts comprising the Dublin Registration Area and the County Borough of Cork, the annual rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

30adh lá de mhí na Nodlag, 1926.*

**TWELVE TOWN DISTRICTS.**

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 21·1 and 17·4; Dublin Registration Area, 13·9 and 15·5; Dublin County Borough, 14·3 and 15·5; Cork, 14·0 and 16·8; Limerick, 23·6 and 21·4; and Waterford, 11·7 and 16·6.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·4 per 1,000. One of the 21 deaths from all causes for Cork was from scarlet fever; and among the 4 deaths for Tralee were one from enteric fever and one from diphtheria.

**DUBLIN REGISTRATION AREA.**

In the Dublin Registration Area the total number of births registered during the week amounted to 137—77 boys and 60 girls—and the deaths to 119—51 males and 68 females.

The deaths registered, omitting the deaths (numbering 7) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·9 per 1,000 of the population. During the fifty-one weeks ending with Saturday last the death rate averaged 15·2 and was 3·1 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the fifty-one weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 112 deaths appertaining to the Area are one from scarlet fever, one from whooping-cough, 3 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the three preceding weeks deaths from whooping-cough were 2, 3 and 5; deaths from diphtheria were 3, 2 and 0; deaths from diarrhoea and enteritis of children under 2 years were 3, 2 and 3; and deaths from influenza were 2, 3 and 2. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 6 deaths (all of which were from pulmonary tuberculosis), as against 11, 10 and 13 from all forms of tuberculosis in the three weeks preceding.

Four deaths were caused by cancer, and 21 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 5 from broncho-pneumonia, 2 from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 9 deaths.

Three accidental deaths, one of which was caused by burns, and one by a motor vehicle, were registered.

Among deaths of infants under one year old, one was due to diphtheria, one to meningitis, 4 to convulsions, 3 to bronchitis, 2 to broncho-pneumonia, 3 to diarrhoea and enteritis, and one to congenital debility.

Twenty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 16 being infants under one year, of whom 2 were under one month old, and 34 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 112 deaths recorded, 46 occurred in hospitals and other public institutions.

**ENGLAND AND SCOTLAND.**

The mortality among civilians for the week ended 25th December in 105 large English towns (including London, in which the rate was 12·1) was equal to an average annual death-rate of 12·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·3 per 1000 persons living, the rate for Glasgow being 13·0, and for Edinburgh 9·5.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

### TWELVE TOWN DISTRICTS.

The Births and Deaths\* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, according to the Census of 1926 (Preliminary Report) is 657,768, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population :—

Twelve Town Districts, 19·8 and 18·2; Dublin Registration Area, 20·4 and 16·6; Dublin County Borough, 21·3 and 17·0; Cork, 22·6 and 17·6; Limerick, 26·3 and 23·3; and Waterford, 11·7 and 15·2.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Included in the 34 deaths from all causes for Cork were one from scarlet fever, one from diphtheria and one from diarrhoea and enteritis of a child under 2 years; and one of the 2 deaths for Sligo was from scarlet fever.

### DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 265—131 boys and 134 girls—and the deaths to 185—88 males and 97 females.

The deaths registered, omitting the deaths (numbering 21) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 20·4 per 1,000 of the population. During the fifty-two weeks ending with Saturday last the death rate averaged 15·3 and was 3·0 below the mean rate for the corresponding portions of the ten years 1916-25. The rate for all deaths registered during the fifty-two weeks was 17·0, and during the corresponding periods of the preceding ten years 19·9.

Included in the 164 deaths appertaining to the Area are one from measles, one from whooping-cough, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the three preceding weeks deaths from measles were one, one and 0; deaths from whooping-cough were 3, 5 and one; deaths from diphtheria were 2, 0 and 3; deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and 3; and deaths from influenza were 3, 2 and 2. One death from encephalitis lethargica was registered.

Tuberculous disease caused 12 deaths (10 of which were from pulmonary tuberculosis and 2 from other forms of tuberculosis), as against 10, 13 and 6 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 20 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 13 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

One accidental death, caused by burns, was registered.

Among deaths of infants under one year old, one was due to whooping-cough, one to meningitis, 4 to convulsions, 3 to bronchitis, 4 to broncho-pneumonia, one to pneumonia, 5 to diarrhoea and enteritis, 8 to premature birth, and 5 to congenital debility.

Forty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 35 being infants under one year, of whom 13 were under one month old, and 39 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 164 deaths recorded, 68 occurred in hospitals and other public institutions.

### ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 1st January in 105 large English towns (including London, in which the rate was 16·7) was equal to an average annual death-rate of 15·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·2 per 1000 persons living, the rate for Glasgow being 16·5, and for Edinburgh 16·2.

\* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 1st January 1927, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Enteric Fever	4	2	2	2	1	.	3
Typhus	.	.	.	.	.	.	.
Small-pox	.	.	.	.	.	.	.
Measles	7	4	2	3	.	.	5
Scarlet Fever	150	146	125	14	26	.	113*
Diphtheria	56	60	56	10	12	4	50
Pneumonia	21	21	17	7	6	.	18

\* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.
